## Question: 1

Which type of vulnerability can occur when a developer exposes a reference to an internal implementation object, such as a file, directory, database record, or key, as a URL or form parameter?

- A. Cross-site Scripting
- B. Insecure Direct Object Reference
- C. Injection Flaw
- D. Cross Site Request Forgery

Answer: B

## Question: 2

After 30 minutes your scan stops with an out-of-session error. What is a possible cause of this error?

- A. Redundant path limit was too low.
- B. A parameter was not tracked.
- C. Flash parsing was turned off.
- D. Platform authentication was not configured.

Answer: B

## Question: 3

AppScan sent the following test HTTP request: GET /web/content/index.php?file=../../../../../../../../etc/passwd%00 HTTP/1.0 Cookie: JSESSIONID=dqt0LSnfhdVyTJkCwTwfLQQSkTTGYX9D79tLLpT1yLQjVhSpZKP9!914376523; customerLanguage=en Accept: \*/\* Accept-Language: en-US User-Agent: Mozilla/4.0 (compatible; MSIE 6.0; Win32) Host: www.ibm.com Although, there is no indication in the response about the existence of a password file, AppScan reported vulnerability with the following reasoning: Global Validation found an embedded script in the response (<script>alert(25053)</script>), which was probably injected by a previous test. The presence of this script in the site suggests that the application is vulnerable to which type of attack?

- A. Stored Cross-site Scripting
- B. Cross-site Scripting
- C. Namazu Path Traversal
- D. Directory Listing

Answer: A

Question: 4

What information do the tabs provide?

- A. the difference between the tabs
- B. how the vulnerability is detected
- C. how AppScan can be configured
- D. how the Web application is scanned

tab provide?

on

Answer: C

Question: 5

You are scanning a Web application and notice that your scan is running very slowly. What would you do to resolve the problem?

- A. increase the number of concurrent connections
- B. decrease the number of concurrent connections
- C. increase the number of concurrent connections
- D. set the timeout to a higher value

ce that your scan is running very slowly. What would you do to resolve the problem?

Answer: B

Question: 6

Which type of vulnerability is most common in a web browser?

- A. Cross-site Scripting
- B. Injection Flaw
- C. Insecure Direct Object Reference
- D. Denial of Service

ript in a user

Answer: A

Question: 7

Which statement is true about zero-day vulnerabilities?

- A. They are caused by insecure coding and are fixed by modifying the application code.
- B. They are detected using application security scanners and exist in the Web application.
- C. They are known vulnerabilities and are fixed by modifying the application code.
- D. They exist in third-party components and are fixed by applying security patches.

Answer: D

Question: 8

What does secure session tokens do?

- A. session tokens are used to track the user's session
- B. session tokens are used to track the user's session and are used to track the user's session
- C. session tokens are used to track the user's session and are used to track the user's session
- D. session tokens are used to track the user's session and are used to track the user's session

Answer: B

Question: 9

Your site contains the URL `http://www.mycompany.com/product/ID=65343`. In this URL, the page parameter `ID=65343` defines a different product page. How can you thoroughly explore the page?

- A. ensure JavaScript is enabled
- B. ignore the page parameter
- C. turn off Redundant Content
- D. track the page parameter
- E. Track the product ID
- F. Ignore the product ID

ID=65343, In this URL, the page parameter `ID=65343` defines a different product page. How can you thoroughly explore the page?

Answer: C, F
