Question: 1

A customer has purchased three IBM System Storage DS8300 systems and would like to have their SAN and storage administrator trained. The customer is worried about having much of their staff out of the office at the same time attending courses. Which training alternative provides the necessary training with the least impact?

- A. Purchase the training CD for the disk subsystem and have the staff do self-paced training
- B. Have the IBM Service Support Representative perform the training
- C. Contact IBM Education Services for an onsite training class
- D. Send one person at a time to an IBM training session

Answer: C

Question: 2

A company has acquired another company and is consolidating data centers. During the consolidation, half of the users of a business-critical application lost access. The users who maintained access experienced slow performance. What is the first action the SAN/storage administrator should take to determine the source of the problem?

- A. Review SAN configuration, connectivity, and zoning
- B. Review application parameters for contention or tuning problems
- C. Use internal disk monitoring tools to determine the problem source
- D. Check the disk parameters in the OS setup on the systems

Answer: A

Question: 3

A customer wants to collect performance data from a newly installed IBM System Storage DS8300 to determine if the system meets expected benchmarks using their application test data. Which tool best gathers the performance data?

- A. IBM DS Storage Manager
- B. IBM Tivoli Storage Resource Manager
- C. IBM TotalStorage Productivity Center for Disk
- D. IBM TotalStorage Productivity Center for Data

Answer: C

Question: 4

A customer SAN environment has undergone significant growth over the past two years. They have also suffered a high turnover rate with administrative personnel. The customer has asked a storage specialist for help in documenting and understanding their changing SAN environment. The ability

2

to make configuration changes to devices would be a plus. Which tool should the storage specialist suggest?

- A. Visio
- B. TPC Basic Edition
- C. IBM Tivoli NetView
- D. Fabric Manager

Answer: B

Question: 5

A customer recently upgraded their open systems server environment. They are concerned about response time. They want the most complete IBM reporting tool for their new SAN environment.

- A. Tivoli Storage Manager
- B. Total Productivity
- C. Total Productivity
- D. Total Storage Performance

DS8300 and several other models still provide good performance. A representative for the reporting of the

Answer: D

Question: 6

A customer using an IBM DS8300 system is experiencing performance problems. After the analysis by the technician, it is determined that the cache hits may be improved by a cache refresh. What benefits of the cache refresh should the technician check?

- A. Using the "vmstat" command
- B. Looking at the number of cache hits
- C. Reading the performance monitor
- D. Checking the cache size

problems. After the cache hits may be improved by a cache refresh. What benefits of the cache refresh should the technician check?

the DS8300 system. The technician should check the cache size, the number of cache hits, and the performance monitor.

Answer: C
