Question: 1

A system administrator is installing an enterprise application in a secured WebSphere Application Server environment. The application has been configured to use security roles. Which of the following is considered a BEST practice when mapping the security roles to the current user registry?

- A. Map the security roles of EJB methods to groups and the security roles of Web resources to users.
- B. Map the security roles of Web resources to groups and security roles of EJB methods to users.
- C. Map all security roles to users
- D. Map all security roles to groups

Answer : D

Question: 2

A system administrator has created data source definition using the Application Deployment Descriptor editor in the Application Server Toolkit (AST). These datasource can be accessed by any:

- A. Applications running on the server
- B. Applications in the current AST workspace.
- C. Modules contained in the EAR file where the definition is made
- D. J2EE Application clients accessing the server

Answer : C

Question: 3

Which of the following must a system administrator define when creating a JDBC provider at the cluster scope?

- A. All datasources for this JDBC provider at the cluster level.
- B. An XA data source implementation type, for the JDBC driver.
- C. The symbolic Variable used in the class path to the JDBC driver for each node in the cluster
- D. The J2C authentication data entry for the datasource at the cluster scope.

Answer : C

Question: 4

A system administrator is installing an enterprise application containing several entity EJBs. All EJBs are contained in the same EJB JAR file. All CMP EJBs in the JAR file, except one, access the same datasources. What is the MOST efficient way to bind the datasources for the EJBs?

- A. Create a separate EJB JAR file for the EJB that is different and set EJB module datasources on both EJB JARs.

2

- B. Ask developers to pre-configure the EJB module with the production datasources JNDI names.
- C. Individually, bind each of the EJBs to the datasource they use.
- D. Bind the EJB module to the datasource used by most EJBs, then specify a separate binding for the EJB that is different.

Answer : D

Question: 5

The WebSphere Rapid Deployment mode. All of the following file types are placed below in WRKDIR:

- A. An Enterprise Application Module
- B. A Web module
- C. An EJB module
- D. A Resource Adapter

Which of the following file types are placed below in WRKDIR:

Answer : D

Question: 6

A customer is in the administrative console. The customer also knows that the WebSphere Application Server V6.0 administrator recommends:

- A. Container-managed authentication
- B. Mapping-Config authentication
- C. Authentication
- D. Container-managed authentication

Which authentication method should the system administrator use when configuring the system using the administrative console?

Answer : A
