## Question: 1

**The SOA reference architecture identifies core services including Interaction, Process, Information, Partner, Access, and Infrastructure. What is one valid reason for excluding one or more of these services in an SOA?**

- A. The application is predominantly middleware in nature, eliminating the need for presentation services.
- B. The consumer and the provider belong to different companies.
- C. The business sponsor has set budget constraints on solution architecture and the architectural components to be included have to be prioritized.
- D. The customer's internal politics make the specification too difficult.

Answer: A

## Question: 2

**The IBM SOA Foundation includes services that support business innovation and optimization. What should be found in an SOA deployment compliant with the SOA Foundation?**

- A. Automatic recognition of marketplace trends and dynamic reconfiguration of services in support
- B. Tools to help simulate business design and to predict the effect that design changes might have on the business
- C. Alerts generated whenever business efficiency drops below a predefined threshold
- D. An SOA dashboard for executives showing new business opportunities categorized by Return on Investment (ROI)

Answer: B

## Question: 3

**What is the next step while architecting an SOA solution after having just completed documenting the business processes?**

- A. Determine the operations required to realize each process
- B. Select a business steward for each process and instruct the steward to identify re-usable services
- C. Identify the services needed to realize each business process and group them into logical components
- D. Identify core and non-core business components

Answer: C

Question: 4

**A mortgage loan provider has a network of branches and franchisees. The provider must provide a different experience for each participant and group of participants. How can the provider achieve this?**

- A. By building an SaaS-based mortgage broker channel to serve all participants.
- B. They could reduce the number of branches by reusing services and reducing development.
- C. By service enabling independent brokers, they can reuse code and quickly create new channels.
- D. By implementing a common API access to the current system, they can control their marketing to all participants.

**network of independent brokers to allow them to realize they can reuse code to attract new participants and reduce development?**

- A. By building an SaaS-based mortgage broker channel to serve all participants.
- B. They could reduce the number of independent broker channels by reusing services and reducing development.
- C. By service enabling independent brokers, they can reuse code to create new channels and quickly create new channels.
- D. By implementing a common API access to the current system, they can control their marketing to all participants and personalize the experience for each participant.

Answer: C

Question: 5

**Several design considerations are associated with SOA. Which statement is true?**

- A. Stateless implies stateless semantics.
- B. Loose coupling is a goal with the adoption of SOA.
- C. Service granularity is a goal of the service.
- D. Service granularity is a goal of the service.

**designing services in an SOA environment?**

- A. Stateless implies stateless semantics.
- B. Loose coupling is a goal with the adoption of SOA.
- C. Service granularity is a goal of the service.
- D. Service granularity is a goal of the service.

Answer: D
