Question: 1

A customer finds that DB2 Alphablox is running out of memory due to DB2 Alphablox cubes using large amounts of memory. The customer does not want to restructure the application. Which two of the following actions should the customer take to correct this? (Select Two Answers)

- A. Limit the size of the in-memory cache for each cube.
- B. Install a second instance of Alphablox on the same machine.
- C. Decrease the memory capacity of the computer in which DB2 Alphablox runs.
- D. Limit the number of Alphablox applications running at one time via the Alphablox Administration panel.
- E. Select the Dynamic (Members loaded into memory as needed) option and change the Dynamic Member Cache Settings.

Answer: A, E

Question: 2

A customer desires to customize and personalize the appearance of Alphablox components on their web pages based on a user's profile. Many aspects of the user's profile are already stored in various locations. To pull these together, the customer is considering using Alphablox's support for custom properties. Which of the following is the correct statement based on this situation?

- A. DB2 Alphablox does not currently support the consolidation of user properties from various locations due to the current RepositoryBlox interface limitations.
- B. The customer will need to purchase another product, such as WebSphere Information Integrator, to pull together various profile settings stored in the various locations for each user.
- C. If the customer is using LDAP-based User Manager or other external user manager (such as NTLM) that has its own editor, the customer can select between External Repository and Local Repository under Property Name on the Alphablox Admin Pages Custom Properties section.
- D. If the customer configures DB2 Alphablox to use a relational database as the Alphablox Repository storage mechanism, this type of activity can successfully be accomplished within the Custom Properties area on the Alphablox Admin Pages without additional data movement from the various locations

Answer: C

Question: 3

A customer has a large number of relational databases. Alphablox supports relational database connection pooling using the Application Server Data Source adapter. In order to take advantage of this feature within Alphablox, the customer must choose from a list of Application Servers to install Alphablox into for this feature to be available. Which of the following options list Application Servers that can use this Data Source adapter?

- A. WebLogic and WebSphere Application Server

2

- B. WebLogic, WebSphere Application Server, and JBoss
- C. WebLogic, Apache Tomcat, and WebSphere Application Server
- D. WebSphere Portal Server, WebSphere Application Server, Apache Tomcat, and WebLogic

Answer: A

Question: 4

Which of the following evaluate the integration of web applications?

- A. Alphablox provides an integration layer between the Alphablox Repository Manager and the web applications.
- B. Alphablox provides a repository-based integration layer between the web applications and the RepositoryBlox API.
- C. Users, groups, and roles are managed by the RepositoryBlox API.
- D. Users and roles are managed by the web applications.

Which of the following evaluate the integration of web applications?

- A. Alphablox provides an integration layer between the Alphablox Repository Manager and the web applications.
- B. Alphablox provides a repository-based integration layer between the web applications and the RepositoryBlox API.
- C. Users, groups, and roles are managed by the RepositoryBlox API.
- D. Users and roles are managed by the web applications.

Answer: B

Question: 5

A customer currently using a data warehouse administrator will require the ability to drill up and drill down in the data. In order to use the data warehouse administrator, the data needs to be in which of the following schemas?

- A. A single table
- B. A star schema
- C. A snowflake schema
- D. A stored procedure
- E. A set or multiple tables

A customer currently using a data warehouse administrator will require the ability to drill up and drill down in the data. In order to use the data warehouse administrator, the data needs to be in which of the following schemas?

- A. A single table
- B. A star schema
