## Question: 1

**An iSeries customer with V5R2 plans to change I/O and memory resources in a Linux partition. Which of the following describes when the Linux partition must be restarted?**

- A - When resources except memory are moved
- B - When memory resources are added or removed from the partition
- C - When processor resources are moved without using iSeries Navigator
- D - When processor resources are removed from the partition but not when resources are added

Answer: B

## Question: 2

**What is the maximum number of active Linux partitions that are supported on an iSeries POWER4 processor?**

- A - 1
- B - 4
- C - 10
- D - 31

Answer: C

## Question: 3

**A customer with an i810 is considering adding a dedicated Linux server to host a new application. The current iSeries application has significant off-hour processing requirements, and the Linux application has large processing requirements during normal business hours. Which of the following would be an advantage of running Linux on iSeries?**

- A - The OS/400 Dynamic resource allocation will move processor capacity' as needed.
- B - The i810 provides On/Off Capacity on Demand support for Linux on iSeries.
- C - Adding a Linux partition to the existing iSeries can be implemented by activating a processor for Linux.
- D - Using OS/400 dynamic partition assignments, processor resources can be moved between OS/400 and Linux partitions on a scheduled basis.

Answer: D

## Question: 4

**How is virtual disk I/O provided in an iSeries Linux partition?**

- A - An independent disk storage pool (ASP) is assigned to Linux.
- B - An iSeries disk controller and associated drives are assigned to Linux.
- C - An OS/400 server storage space object is defined and assigned to Linux.
- D - iSeries service tools define a disk pool that is assigned to Linux.
