Question: 1

What is one important way that IBM Host Access Transformation Services (HATS) can be used?

- A. HATS can be used to develop middleware applications that account for asynchronous transaction processing.
- B. HATS can be used to develop existing terminal applications in COBOL directly on the mainframe.
- C. HATS can be used to develop Java-based JINI secure components.
- D. HATS can be used to transform and expand the connectivity of your terminal applications by extending the proven business logic as Web services.

Answer: D

Question: 2

How is the Eclipse platform used with IBM Host Access Transformation Services (HATS)?

- A. HATS uses the middleware connectivity embedded in Eclipse to access transaction processing middleware.
- B. HATS allows you to connect to Java JINI security objects using the Eclipse-based platform.
- C. HATS gives you the ability to transform access to your existing host applications using rich client GUI applications that run in Eclipse.
- D. HATS does not use the Eclipse-based platform.

Answer: C

Question: 3

What operating systems are supported for running an IBM Host Access Transformation Services (HATS) Rich Client Platform (RCP) application?

- A. Windows 2000, Windows XP, RedHat Enterprise Linux 4.0, Novell Linux Desktop 9
- B. Windows XP, Windows Vista, and MacOS
- C. Only i5/OS V5R4
- D. Only Windows 2000 and Windows XP

Answer: A

Question: 4

How does IBM Host Access Transformation Services (HATS) simplify combining multiple screens of tabular data?

- A. HATS uses a Java interface that transforms multiple screens into middleware to support SOA.

2

- B. HATS combines multiple screens of data outside of the HATS tools using third-party tools.
- C. Multiple screens of data cannot be combined using HATS.
- D. HATS provides a screen combination wizard and editor to combine data from multiple host screens.

Answer: D

Question: 5

What is IBM Host Access Transformation Services (HATS)?

- A. HATS allows for WebSphere to transform XSLT transformations into Java code.
- B. HATS is a set of tools that allow you to easily create Web, portal, or rich client applications that provide an easy-to-use GUI for your green screen applications.
- C. HATS is a process in which HTML transformations are performed inside a Java script.
- D. HATS is a single Java library that adds on to WebSphere.

Answer: B

Question: 6

What is the IBM Host Access Transformation HATS Toolkit?

- A. HATS Toolkit is a set process for integration for WebSphere with Rational ClearQuest.
- B. HATS Toolkit comprises all of the IBM Rational SDF tools.
- C. HATS Toolkit is a set of plug-ins for the Eclipse-based, IBM Rational? Software Delivery Platform, enabling you to develop new Web, portal, and rich client applications.
- D. HATS Toolkit allows the Business Analyst to get a view into the requirements of a HATS project.

Answer: C

Question: 7

What is one of the prime features of IBM Host Access Transformation Services (HATS)?

- A. HATS allows you to enhance 3270 and 5250 screens with a GUI.
- B. HATS allows you to develop middleware transaction-processing components.
- C. HATS provides new programmers with an easy environment for existing terminal systems coding.
- D. HATS provides an interface with IBM Rational ClearQuest that allows your application errors to be tracked automatically.

Answer: A

3

Question: 8

Which of the following is the recommended environment for HATS Web applications?

- A. WebSphere Application Server
- B. WebSphere Application Server Express
- C. WebSphere Application Server Community Edition
- D. WebSphere Application Server Business Edition

Answer: B

Question: 9

Which artifacts can be used to protect Host Access Transformation Services (HATS)?

- A. HATS does not support security artifacts
- B. Java JINI security artifacts
- C. EJB Access Bearers
- D. Web services artifacts

Answer: C

Question: 10

Host Access Transformation Services (HATS) is designed to replace traditional fat client emulators. Which of the following is a benefit of HATS?

- A. HATS allows you to run applications on a single platform.
- B. HATS has 4GL languages.
- C. HATS allows you to run applications on a single platform without costly rewrites.
- D. HATS is the FSR.
