Question: 1

Which three key requirements are addressed by the Mainframe Enterprise Security Hub?

- A. simplified user identity administration, generation of reports that show compliance posture, and better control over privileged user access
- B. policy-based access control, EAL 4+ Common criteria rated implementation, and 24x7 awareness of breaches
- C. application security, data disclosure and privacy compliance, and network security
- D. secure storage, firewall management and Intrusion detection management

Answer: B, C, D

Question: 2

The example that was given of security in the automobile industry made which key point?

- A. Security protects best when it's directed at external threats.
- B. Security gets a lot of focus early on, but over time, that focus can be dropped or neglected.
- C. Security is an important add-on. just like car seats for children in automobiles.
- D. As an industry or focus area evolves, the evolution is from an attitude of security being an afterthought to security being designed in from the beginning.

Answer: D

Question: 3

In the discussion about Smarter Planet and its security implications, which of the following was given as an example of how Smarter Planet initiatives drive security requirements?

- A. There are many military applications involved in Smarter Planet and these have obvious security requirements that they drive
- B. The information/data that Smarter Planet initiatives often rely upon needs to be segmented and secured to ensure access is only by those with appropriate access rights.
- C. Smarter Planet almost always involves virtual implementations and these can have significant security holes, if they are not addressed.
- D. Smarter Planet really brings home the need for traditional security such as anti-virus and firewall technology

Answer: B

Question: 4

What are the 3 focus areas highlighted in this presentation?

- A. identity & access assurance, data & application security and data center & operational security
- B. mainframe, distributed and virtualized environments
- C. network security, systems security and application security
- D. administration time security, application development time security and run-time security

Answer: B
