Question: 25

**What is the simplest definition of a Guardium domain?**

- A. A Guardium entity containing a series of attributes
- B. An object consisting of tables and relationships between those tables providing a view of the data that Guardium stores
- C. A simple identification label to indicate ownership or control of a Guardium resource
- D. A model of a Guardium system describing the different entities involved in the environment and their relationships

Answer: B

Question: 26

**Which of the following Guardium facilities is used to import external data?**

- A. External Data Connector
- B. Multi-format Importing Utility
- C. Special Data Collector
- D. System Integration Facility

Answer: A

Question: 27

**Which of the following steps must be taken before a custom table can be defined on the Guardium appliance?**

- A. The Guardium API must be used to notify the engine that a custom table is going to be defined.
- B. All other users of the Guardium user interface must be logged off since there can only be one active session when the custom table is being defined.
- C. A test provided by Guardium must be run on the data server to make sure no malicious data is found in the table to be queried.
- D. Data in the existing database must be verified to make sure that the different data types are supported by Guardium's custom tables.

Question: 28

**Which of the following native SQL commands is required to link external data to internal data?**

- A. IMPORT
- B. JOIN
- C. ALTER
- D. LINK

Answer: B

Question: 29

**When the S-GATE is in open mode, what would you need to configure to enforce an S-GATE Terminate action?**

- A. Rule with S-GATE Attach action
- B. Rule with S-GATE Terminate action
- C. Rule with S-GATE Attach followed by a rule with S-GATE Terminate action
- D. Rule with S-GATE Attach followed by a rule with S-TAP Terminate action

Answer: C

Question: 30

**Which of the following is not a valid termination action for an extrusion rule?**

- A. Termination actions are not available for extrusion rules
- B. S-TAP Terminate
- C. Termination actions are available for extrusion rules, however these are executed by the database management system and not Guardium.
- D. S-GATE Terminate

Answer: D

Question: 31

3

**What is one of the advantages of S-TAP over traditional SPAN implementation?**

- A. Monitoring network activities
- B. None, as S-TAP is an identical software implementation of SPAN.\_
- C. Monitoring local traffic
- D. Faster communication with the collector\_

Answer: C

Question: 32

**Which termination mechanism is most suitable for monitoring privileged users where preventing data leaks is much more important than latency?**

- A. S-GATE Terminate
- B. S-TAP Terminate
- C. Both S-TAP and S-GATE Terminate
- D. RESET

Answer: A

Question: 33

**Which of the following statements is true about queries and reports in Guardium?**

- A. A query can only be used to create one report.
- B. A query can be used to create many reports.
- C. A report can be based on the combination of multiple queries.
- D. A query can only be used to create either a tabular or a chart style report, but not both.

Answer: B

Question: 35

**The query builder contains all of the following panes except for:**

- A. The Entity List

- B. The Query Fields
- C. The Query ID Selector
- D. The Query Conditions

Answer: C

Question: 36

**Which of the following is true about Guardium's entitlement reports?**

- A. Guardium includes a set of built-in entitlement report definitions (i.e. Oracle) and the ability to create custom entitlement reports for any other relational database.
- B. Guardium does not offer standard built-in entitlement reports and the user must create these reports based on their database specifications.
- C. Guardium includes Oracle entitlement reports as a standard feature, however reports for all other database engines (i.e. IBM DB2) can be downloaded via a subscription service.
- D. Guardium's entitlement reporting is an optional feature that requires a separate license.

Answer: A

Question: 37

**What is a Guardium vulnerability assessment (VA)?**

- A. A test that employs state-of-the-art algorithms to determine the potential risks of your network.
- B. A series of predefined and custom tests that allow customers to automatically identify and address database vulnerabilities.
- C. An optional service from Guardium where a security specialist visits a customer's site before a proof-of-concept engagement to determine the customer's specific requirements.
- D. A piece of software distributed as a multi-platform plug-in that allows a supported database management system to constantly monitor potential threats and report on these periodically.

Question: 38

**What are the four types of tests that can be used in a Guardium vulnerability assessment?**

- A. User defined, observed behavioral, database configuration and server configuration
- B. Predefined, subscription-based, observed behavioral and configuration vulnerability
- C. OS-level, native, special and external
- D. OS-level, kernel, special and external

Answer: A

Question: 39

### What is Guardium's Database Protection Subscription Service?

- A. A service that may be purchased separately in order to enable Guardium to safeguard database management systems other than Sybase AES.
- B. A subscription to the latest updates for the various Guardium product components.
- C. An additional package required for the vulnerability and threat management solutions to integrate with CAS.
- D. A service that provides the Guardium instance with quarterly updates to its built-in assessment tests, so the assessment is up-to-date with industry best practices and new vulnerabilities.

Answer: D
