Question: 1

You are the administrator for a MetaFrame Presentation Server 3.0 farm that consists of three zones: 20 servers are your headquarters location in St Petersburg and 10 servers each in the Kiev and Minsk offices. Techexams.ws Techexams.ws is planning to scale down its operations in Minsk. Only two servers running MetaFrame Presentation Server will be required to host a Minsk-based regional banking application and office productivity applications. How should you implement this change?

- A. Transition the three zones into three farms.
- B. Collapse all three zones into one large zone.
- C. Keep the current configuration of three zones.
- D. Collapse the Kiev and Minsk zones together.

Answer: C

Question: 2

As an administrator at Techexams.ws you have recently purchased new servers as part of your three-year replacement cycle. The new servers are significantly more powerful than those in your current environment. Based on the current set of applications, you wish to determine how many additional sessions can be supported on each server. Which two tools would you most likely use for this purpose? Select two.

- A. Citrix Network Manager
- B. Citrix Resource Manager
- C. Microsoft Network Monitor
- D. Microsoft Performance Monitor

Answer: B, D

Question: 3

Techexams.ws is headquartered in Tokyo and has deployed MetaFrame Presentation Server for office productivity and e-mail. You also have manufacturing facilities in Taiwan and Bangladesh. A new ERP application will be deployed to ensure better management material, resources and shipping. All back-end-data will be housed in Tokyo, and two servers will be deployed in Taiwan and Bangladesh to host office productivity for managers. How would you deploy MetaFrame Presentation Server Taiwan and Bangladesh?

- A. Add one additional farm since Citrix licenses can span farms
- B. Add one additional farm since back-end data can be accessed from any farm.
- C. Add one additional zone encompassing Taiwan and Bangladesh and implement zone preference and failover.
- D. Add two additional zones, one in Taiwan and one in Bangladesh, and implement zone preference and failover.

2

Answer: D

Question: 4

You are the new Tech Exams administrator for a MetaFrame Presentation Server farm that consists of nearly 100 servers. You notice that the servers automatically installed the drivers for the HP LaserJet printers, but you are reviewing the server logs and find that the HP LaserJet drivers are not loading on the Packard drivers loaded on the servers. You want to ensure that the servers load the drivers with the drivers that are required.

- A. Replicate all drivers from the server to the client.
- B. Delete all of the drivers that are not utilized.
- C. Delete all of the drivers that are not universal printer drivers.
- D. Review the driver map and delete the map drivers when they are not required.
