## Question: 1

**Which step must an administrator take before configuring administrative roles within a Provisioning Server environment?**

- A. Create an administrative service account
- B. Create the administrative groups in Active Directory
- C. Grant the farm administrator db\_admin rights in SQL
- D. Add the currently logged in user to the local administrator group

Answer: B

## Question: 2

**Scenario: An administrator wants to delegate management of a Provisioning Server farm. The administrator needs to delegate only these specific tasks:**

**1 Shut down target devices 2 Boot target devices 3 Send messages to target devices**

**Which role should the administrator assign for these tasks?**

- A. Device Operator
- B. Site Administrator
- C. Farm Administrator
- D. Device Administrator

Answer: A

## Question: 3

**Scenario: An administrator completed the vDisk creation process as well as the creation of several target devices. The administrator took the necessary steps for Active Directory integration including enabling Active Directory machine account password management for the vDisk and enabling automatic password support for the server. The administrator also made sure that the Master Target Device was added to the correct domain. However, the administrator is unable to log on to the domain from any of the target devices when attempting to stream the vDisk. Which step should the administrator take to troubleshoot this issue?**

- A. Verify that the vDisk is in standard image mode
- B. Reset all the machine accounts in Active Directory
- C. Create a machine account for each target device in Active Directory
- D. Run the Image Optimization Wizard and deselect the disable machine account password changes option

Answer: C

Question: 4

**How can the administrator set the level of diagnostic information collected for a Provisioning Server environment to errors only?**

- A. Set the Stream Service to debug level 2
- B. Set the Stream Console to debug level 1
- C. Set the MCLI\_LOG.CONFIG file to debug level 4
- D. Set the ENTERPRISEACCESS\_LOG.CONFIG file to debug level 3

Answer: B

Question: 5

**Scenario: An administrator has created a dynamic vDisk and assigned it to a target device. When PXE booting the target device, the following error message appears: vDisk is locked Why is the administrator receiving this error message?**

- A. The vDisk is in standard image mode
- B. The administrator failed to format the vDisk
- C. The administrator failed to unmount the vDisk
- D. The vDisk does NOT have enough space allocated

Answer: C

Question: 6

**When preparing to build a vDisk image from a Master Target Device, which boot option should an administrator select in the target device properties?**

- A. vDisk
- B. Hard Disk
- C. Floppy Disk
- D. Local HD as a boot device

Answer: B

Question: 7

**An administrator is preparing a Master Target Device for imaging. What should the administrator do before installing the target device software on the Master Target Device?**

- A. Turn on spanning tree
- B. Configure the network adapter BIOS
- C. Run the Provisioning Server Image Builder
- D. Enable hibernation and power management features

Answer: B

Question: 8

**Scenario: Several branches of an organization are located throughout North America, each with its own administrator. The farm administrator for Provisioning Server wants to delegate control to each branch location administrator within the organization. How should the farm administrator organize the farm in order to provide each branch office administrator with full administrative privileges within their branch?**

- A. Create a site for each branch office location
- B. Create a view for each branch office location
- C. Create a separate store for each branch office location
- D. Create a device collection for each branch office location

Answer: A

Question: 9

**In which three situations would an administrator need to mount a vDisk? (Choose three.)**

- A. Creating a vDisk file
- B. Changing the image mode of the vDisk
- C. Editing the contents of a vDisk image file
- D. Viewing the contents of a vDisk image file
- E. Formatting the vDisk file so that an image can be written to it

Answer: C, D, E

Question: 10

**An administrator changed the location of the database in a Provisioning Server environment. In order to re-join the database to an existing Provisioning Server farm, the**

administrator must specify the \_\_\_\_\_ in the Configuration Wizard. (Choose the correct phrase to complete the sentence.)

- A. New location
- B. Administrator group
- C. Service user account
- D. Farm name, site name, and location

Answer: A

Question: 11

An administrator must specify the \_\_\_\_\_ of vDisks to the new Virtual Hard Disk. (Choose the correct phrase to complete the sentence.)

- A. .PVP file
- B. DATABASE.MDF
- C. UPGRADEAGENT
- D. VHDCONVERTER

Answer: D
