

**1Z0-895**

Java EE 6 Enterprise JavaBeans Developer Certified Expert Exam

Document version: 8.04.11

## Important Note About 1Z0-895 PDF

techeXams' **1Z0-895 PDF** is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

## Question: 1

**A developer needs to deliver a large-scale enterprise application that connects developer chooses an EJB 3.1-compliant application server, which three are true about the EJB business component tier? (Choose three.)**

- A. Load-balancing is NOT a guarantee for all EJB 3.1 containers.
- B. Clustering is guaranteed to be supported by the EJB 3.1 container.
- C. Thread pooling can be optimized by the Bean Provider programmatically.
- D. Bean Providers are NOT required to write code for transaction demarcation.
- E. Support for server fail-over is guaranteed for an EJB 3.1-compliant application server.
- F. EJB 3.1 compliant components are guaranteed to work within any Java EE 6 application server

Answer: A, C, F

**Explanation:**

The EJB tier hosts the business logic of a J2EE application and provides system-level services to the business components problems include state maintenance, transaction management, and availability to local and remote clients. The EJB 3.1 specification does not address "high-end" features like clustering (not B), load-balancing (A) and fail-over (not E). F: The target platform for EJB is Java EE.

## Question: 2

**A developer examines a list of potential enterprise applications and selects the most appropriate technologies to use for each application. For which two applications is EJB an appropriate solution? (Choose two.)**

- A. To render a GUI for mobile clients.
- B. As a container for web-tier components including JSP.
- C. As a Web service endpoint accessed by non-Java clients.
- D. To receive and respond to HTTP Post requests directly from a web browser.
- E. As an online shopping cart which can persist across multiple sessions with a single client.

Answer: C, E

2

## Question: 3

**Which two statements are true? (Choose two.)**

- A. Typically, remotely accessible objects should be coarse-grained.
- B. If a client accesses an enterprise bean locally such access must be mediated by the EJB container.
- C. A given enterprise bean's transaction information is immutable because it is deployed across various containers.
- D. If a container provides services NOT required by the EJB specification, then that container is NOT considered to be an EJB container.
- E. An enterprise bean's transaction information can be accessed by external tools only if the information is contained in an XML deployment descriptor.

Answer: B, D

**Explanation:**

D: An EJB container is nothing but the program that runs on the server and implements the EJB specifications. EJB container provides special type of the environment suitable for running the enterprise components. Enterprise beans are used in distributed applications that typically contains the business logic. Incorrect answers: A: Remotely accessible objects should be fine-grained

## Question: 4

**Assume you would like to receive notification from the container as a stateless session bean transitions to and from the ready state. Which of the following life cycle back annotations would you use? (Choose one.)**

- A. @PostConstruct, @PostDestroy
- B. @PostConstruct, @PreDestroy
- C. @PreConstruct, @PostDestroy
- D. @PostConstruct, @PostDestroy, @Remove
- E. @PostConstruct, @PreDestroy, @Remove

**Explanation:**

Answer: B

The Lifecycle of a Stateless Session Bean The EJB container typically creates and maintains a pool of stateless session beans, beginning the stateless session bean's lifecycle. The container performs any dependency injection and then invokes the method annotated `@PostConstruct`, if it exists. The bean is now ready to have its business methods invoked by a client. At the end of the lifecycle, the EJB container calls the method annotated `@PreDestroy`, if it exists. The bean's instance is then ready for garbage collection. Lifecycle of a Stateless Session Bean:

Note: An enterprise bean goes through various stages during its lifetime, or lifecycle. Each type of enterprise bean (stateful session, stateless session, singleton session, or message-driven) has a different lifecycle. Reference: <http://docs.oracle.com/javaee/6/tutorial/doc/giplj.html>

## Question: 5

**Which API must an EJB 3.1 container make available to enterprise beans at runtime?  
(Choose one)**

- A. The JXTA 1.1 API
- B. The MIDP 2.0 API
- C. The Java SE 6 JNDI API
- D. The Java SE 5 JDBC API

Answer: C, D

## Get Full Version of Exam 1Z0-895 PDF Q&A

techeXams presents authentic, genuine and valid study material, which promise 100% success in very first attempt. To take optimal results for 1Z0-895 exam, you need to buy full version of 1Z0-895 question and answer. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. So come join us and quench your thirst for knowledge.
