

## **70-403**

**(TS: System Center Virtual Machine Manager 2008, Configuring)**

Document version: 9.30.06

## Important Note, Please Read Carefully

techeXams' 70-403 Exam is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

### Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at techeXams and update 3-4 days before the scheduled exam date. Here is the procedure to get the latest version:

1. Go to <http://www.techeXams.ws/>
2. Log in the User Center
3. The latest versions of all purchased products are downloadable from here. Just click the links.

### Feedback

If you find any possible improvement, then please do let us know. We are always interested in improving the quality of this product. Feedback can be send at: [customer.service@techeXams.ws](mailto:customer.service@techeXams.ws)

### Explanations

This product does not include explanations for all questions at the moment. If you are interested in providing explanations for this exam, please contact [customer.service@techeXams.ws](mailto:customer.service@techeXams.ws).

## Question: 1

You work as an IT engineer in an international company which is named Wikigo. You are in charge of the network of your company. The network of your company consists of a System Center Virtual Machine Manager (SCVMM) 2008 server named Server01 and three hosts named HostA, HostB, and HostC that are in the All Hosts host group. Each host has 16 GB of memory and contains three virtual machines. You are required to guarantee that the virtual machines on HostC occupy less than 14 GB of memory. What action should you perform to achieve it?

- A. Install File Server Resource Manager (FSRM) on HostC and create a new quota template.
- B. Install Windows System Resource Manager (WSRM) on the SCVMM server and configure quota points on virtual machines that are hosted on HostC.
- C. Add HostC to a new host group and configure host reserves for the new host group.
- D. Add HostC to a new host group and configure quota points on virtual machines that are hosted on Host3.
- E. Install Windows System Resource Manager (WSRM) on the SCVMM server and create a new quota template.

Answer: C

## Question: 2

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01. You configure a host group and add all hosts to the host group. Server01 is a member of the host group and it has a Self-Service Portal installed which can create virtual machines, but some virtual machines have more than 1 GB of RAM. In order to stop the self-service users creating virtual machines of more than 1 GB of RAM, which option would you choose?

- A. Set the Memory (in MB) value to 1024, create a Self-Service user role and set the scope to All Hosts on the Reserves tab in the Host Properties for Server01.
- B. Create a new template, create a Self-Service user role and set the scope to All Hosts on the Reserves tab in the Host Properties for Server01.
- C. Create a new template, set the Virtual machine memory to 1 GB and create a Self-Service user role and associate the template and the user role.
- D. Set the Memory (in MB) value to 1024, create a Self-Service user role and set the scope to All Hosts on the Reserves tab in the Host group properties for All Hosts.
- E. Create a new hardware profile and set the Virtual machine memory to 1 GB, create a Self Service User role and enable the Set quota for deployed virtual machines option.

Answer: C

2

## Question: 3

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01. By using it you can manage a large virtual machine infrastructure. You have a virtual machine that has self-service users installed and the virtual machine has standard hardware configuration. Now you are asked to make sure whether all virtual machines created by self-service users have a standard hardware configuration. To ensure this, what should you do first?

- A. First you should create a new guest operating system profile from the VMM Administrator Console.
- B. First you should run the set-VMhost cmdlet from the VMM Administrator Console.
- C. First you should run the set-vm cmdlet from the Windows PowerShell Virtual Machine Administrator command shell.
- D. First you should run the set-VMhost cmdlet, from the Windows PowerShell Virtual Machine Administrator command shell.
- E. First you should run the set-vm cmdlet from the VMM Administrator Console.

Answer: B

## Question: 4

You work as an IT engineer in an international company which is named Wikigo. There are many System Center Virtual Machine Manager (SCVMM) 2008 servers in the company, and you are in charge of a server named server01, which manages six servers that install the Hyper-V server role on them. Three of them are configured in a failover cluster and the Hyper-V servers are members of a host group named HyperCluster. There is a virtual machine named VM1 in the library share. Now you are assigned a task to make sure that VM1 in the library share can only be assigned to a Hyper-V server in the failover cluster, not to Hyper-V servers out of the failover cluster, so you should find a way to permit other virtual machines to be assigned to all Hyper-V servers. Which solution should you choose?

- A. The way to modify the quota point value for VM1.
- B. The way to deploy the hosts that are members of the failover cluster as unavailable for placement.
- C. The way to modify the hardware configuration for VM1.
- D. The way to deploy the hosts that are not members of the failover cluster as unavailable for placement.

Answer: C
