Question: 1

You are the administrator of your company network. Now you're in charge of a SQL Server 2008 instance. A user called Jack is running a query and he reports that he is waiting for it to complete. So you have to identify whether the query is blocked. So which tool should you use to achieve this?

- A. You should use the Windows System Monitor tool
- B. You should use the Database Engine Tuning Advisor tool
- C. You should use the Job Activity Monitor tool in Microsoft SQL Server Management Studio
- D. You should use the Activity Monitor tool in Microsoft SQL Server Management Studio

Answer: D

Question: 2

You are the administrator of your company network. You have to install a SQL Server 2008 instance for a new application on an existing server. The server contains a default SQL Server 2005 instance. You must make sure that certified third-party applications have access to their respective database instances. You have to ensure that when you take measures to achieve this, the existing application environments will not be changed, and you should use as little database administrative effort as possible. So what should you do?

- A. You should upgrade the SQL Server 2005 application to use SQL Server 2008.
- B. You should upgrade the SQL Server 2005 instance to a SQL Server 2008 instance.
- C. You should install SQL Server 2008 as a named instance. Configure the new application to use the new instance.
- D. You should install SQL Server 2008 as the default instance. Configure the new application to use the default instance.

Answer: C

Question: 3

You are the administrator of your company network. You're in charge of a SQL Server 2008 cluster in a high security environment. Now you intend to configure and use encrypted connections for the clustered virtual SQL Server. You have to install the certificate which will be used for encryption. So what should you do?

- A. You should install the encryption certificate in the cluster group.
- B. You should install the encryption certificate on each individual node.
- C. You should install the encryption certificate in the cluster quorum drive.
- D. You should install the encryption certificate in the SQL Server shared disk.

2

Answer: B

Question: 4

You are the administrator of your company network. You are in charge of three SQL Server 2008 instances named Instance1, Instance2, and Instance3. Each of them runs on a separate server. Between Instance1 and Instance2, a mission-critical database is mirrored. At present Instance1 currently acts as the Principal, while Instance3 acts as the witness. You intend to apply a patch on both servers. The server needs to restart itself. You have to identify the sequence of steps necessary to ensure that the patching process is completed with the minimum time and the database is online on the partner that currently does not apply the patch. Besides this two, you have to ensure that the database does not failover to the other partner during this time. So what should you do?

- A. You should apply the patch to the server which runs Instance2. Apply the patch to the server which runs Instance1.
- B. You should apply the patch to the server that runs Instance2. Manually failover the mirroring session. Apply the patch to the server that runs Instance1.
- C. You should remove the mirroring session. Apply the patch to the server that runs Instance2. Apply the patch to the server that runs Instance1. Re-establish the
- D. You should suspend the mirroring session. Apply the patch to the server that runs Instance2. Resume the mirroring session. Manually failover the mirroring
- E. Apply the patch to the server that runs Instance1.

Answer: D

Question: 5

You are the administrator of your company network. You are in charge of checking the performance of a SQL Server 2008 instance. Now you have to identify the longest-running common language runtime (CLR) queries. So which dynamic management view should you use?

- A. sys.dm_exec_sessions
- B. sys.dm_os_wait_stats
- C. sys.dm_exec_requests
- D. sys.dm_exec_query_stats

Answer: D

Question: 6

You are the administrator of your company network. You are performing the migration of an application from Microsoft SQL Server 2000 to Microsoft SQL Server 2008. You have to monitor the SQL Server instance to record the use of features that will be discontinued. So what should you do?

- A. You should use the SQL Server 2008 Upgrade Advisor.

3

- B. You should use Exception event classes.
- C. You should use event classes.
- D. You should use Deprecation Final

Completed and
 Completed and Exception
 Announcement and

Answer: D

Question: 7

You are the administrator of a SQL Server 2008 instance. A management pack is installed to collect performance data. You want to implement a process to collect data from a data warehouse on different days of the week.

of a SQL Server
 to collect
 house. You have to
 management data
 and you implement?

- A. You should create a data collector.
- B. You should create a data collector and a data collector set.
- C. You should create a data collector and a data collector set and a data collector set.
- D. You should create a data collector and a data collector set.

at the same time. One job

Answer: A

Question: 8

You are the administrator of a SQL Server 2008 instance which has a job named Job1. The job is scheduled to run every day at 10:00 AM. The job is currently in a failed state.

of a SQL Server
 use seven shared
 named Job1 doesn't

- A. You should create a new job.
- B. You should create a new job and add a step to the job.
- C. You should create a new job and add a step to the job and add a step to the job.
- D. You should add a step to the job.

Answer: C
