

70-455

(TS: Microsoft SQL Server 2005 Business Intelligence – Implementation and Maintenance)

Document version: 9.30.06

Important Note, Please Read Carefully

techeXams' 70-455 Exam is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at techeXams and update 3-4 days before the scheduled exam date. Here is the procedure to get the latest version:

1. Go to <http://www.techeXams.ws/>
2. Log in the User Center
3. The latest versions of all purchased products are downloadable from here. Just click the links.

Feedback

If you find any possible improvement, then please do let us know. We are always interested in improving the quality of this product. Feedback can be send at: **customer.service@techeXams.ws**

Explanations

This product does not include explanations for all questions at the moment. If you are interested in providing explanations for this exam, please contact **customer.service@techeXams.ws**.

Question: 1

You're the administrator of your company network. And SQL Server 2008 has been deployed on your computer. Now you use SQL Server 2008 to create a SQL Server 2008 Analysis Services (SSAS) solution and then you design a Business Intelligence (BI) solution. There's a dimension named DEClients in the solution. And the dimension is used to stand for clients who buy products in your company. The solution gives a list of top 8 Clients according to the sales amount. End users of the solution use filters in Microsoft Excel worksheet to analyze data. Now you're assigned a task to make sure that when the filters are applied, the list must be updated. So which named set expression should you use to achieve this?

- A. CREATE SESSION SET CURRENTCUBE.[Top 10 Clients] AS TOPCOUNT([DClients].[Clients].MEMBERS,10,[Measures].[SalesAmount])
- B. CREATE HIDDEN SET CURRENTCUBE.[Top 10 Clients] AS TOPCOUNT([DClients].[Clients].MEMBERS,10,[Measures].[SalesAmount])
- C. CREATE DYNAMIC SET CURRENTCUBE.[Top 10 Clients] AS TOPCOUNT([DClients].[Clients].MEMBERS,10,[Measures].[SalesAmount])
- D. CREATE SET CURRENTCUBE.[Top 10 Clients] AS TOPCOUNT([DClients].[Clients].MEMBERS,10,[Measures].[SalesAmount])

Answer: C

Question: 2

You're the administrator of your company network. And SQL Server 2008 has been deployed on your computer. Now you use SQL Server 2008 to design a Business Intelligence (BI) solution. There is a SQL Server 2008 Analysis Services (SSAS) cube which contains 110 million Fact rows and 750 dimension attributes. The cube reads data from a remote data source and increases several measure groups by 1 million rows everyday. You intend to deploy this SQL Server 2008 Analysis Services (SSAS) cube. You want to increase the total number of users by 180 percent for the cube. During cube processing, you have to capture the baseline performance on the overall system. So what should you do?

- A. You should use the sp_monitor system stored procedure to monitor cube processing events.
- B. You should use the sp_trace_setfilter system stored procedure to monitor cube processing events.
- C. You should configure the data collector to collect Query Activity statistics during cube processing.
- D. You should configure the data collector to collect Performance Counters statistics during cube processing.

Answer: D

Question: 3

You're the administrator of your company network. And you are in charge of a Microsoft SQL Server 2005 Reporting Services (SSRS) instance which is deployed as a single server and configured to use Native mode. Besides this, the instance also has another feature: A custom data extension developed by using Microsoft .NET Framework 2.0. Now you intend to upgrade the instance to SQL Server 2008 Reporting Services without loss of functionality. So what should you do to achieve this?

- A. You should uninstall Internet Information Services (IIS).
- B. You should upgrade the data extension to .NET Framework 3.5.
- C. You should edit the RSWebapplication.config file to refer to the upgraded SSRS endpoint location.
- D. You should install a new instance of SSRS. Migrate the existing configuration files and database to the new instance.

Answer: D

Question: 4

You're the administrator of your company network. And SQL Server 2008 has been deployed on your computer. Now you use SQL Server 2008 to design a Business Intelligence (BI) solution. Now you manage a SQL Server 2008 instance which hosts a database. At present the database is scheduled for a full backup every month and uses the bulk-logged recovery model. The 4-terabyte database contains 3.5 terabyte of data in a read-only filegroup. You have to back up the database changes to a tape drive every night, you must use as little storage space and time as possible. So which backup strategy should you use?

- A. You should use file backup
- B. You should use Partial backup
- C. You should use differential backup
- D. You should use differential Partial backup

Answer: D

Question: 5

You're the administrator of your company network. And you're in charge of designing the SQL Server 2008 Analysis Services (SSAS) data mining. The customer table contains column names such as: Age, Name, IsBuyer, Customer_key, Education Level. You intend to use Microsoft Decision Trees algorithm to build a data mining model for the customer table. You have to identify the data columnCmodel parameter pairs to forecast the potential buyers. Click here to input the answer.

70-455 Demo Exam

A.

Data Column
Customer_Ke
Name
Education Lev
Age
IS Buyer

B.

Data Column
Customer_Ke
Name
Education Lev
Age
IS Buyer

Answer: B

Question: 6

You're the administrator of a Microsoft SQL Server 2008 has been deployed on your company's server. The server is running Microsoft Business Intelligence (BI) solutions. The server is processing all transaction data. In order to improve the performance of the BI solutions, you should choose the following options:

08 has been deployed on your company's server. The server is running Microsoft Business Intelligence (BI) solutions. The server is processing all transaction data. In order to improve the performance of the BI solutions, you should choose the following options:

- A. You should choose the following options:
- B. You should choose the following options:
- C. You should choose the following options:
- D. You should choose the following options:

Answer: D
