Important Note About 70-460 PDF

techeXams' **70-460 PDF** is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

Question: 1

HOTSPOT

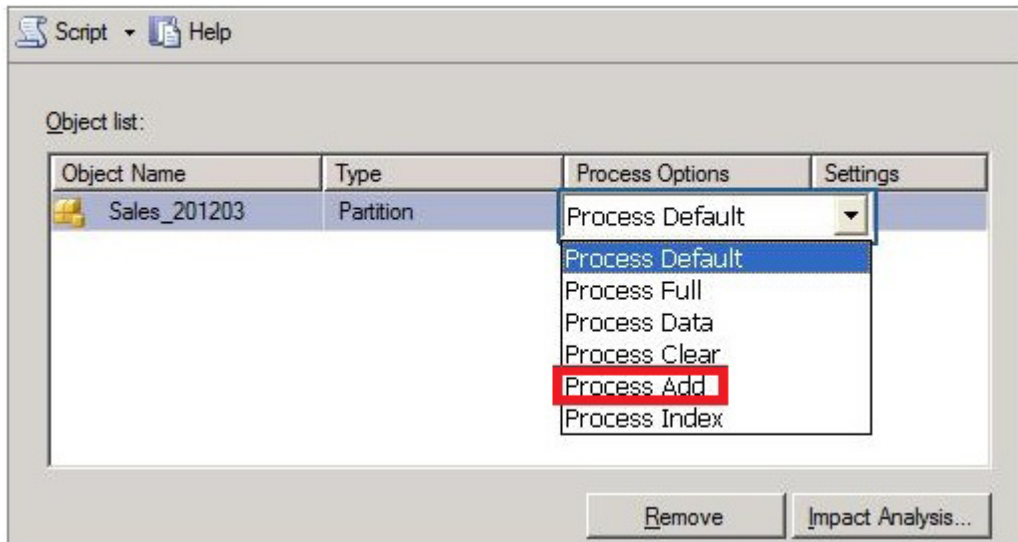

A SQL Server Analysis Services (SSAS) cube contains billions of rows of data and is rapidly increasing in size. The cube consists of a single measure group and a single partition. The cube is currently processed by using the Process Full process option. You have the following requirements to reduce the cube processing time:

- Partition the measure group by month.
- Create a staging table that contains only data which is more recent than the last time the cube was processed.
- Do not include data updates or deletions in the staging table.
- Insert records from the staging table into the appropriate partition.

You need to change the process option to meet the requirements. Which process option should you choose?

To answer, select the appropriate option from the drop-down list in the dialog box.

Answer:

Question: 2

You are modifying a SQL Server Reporting Services (SSRS) report for a SQL Server Analysis Services (SSAS) cube. The report defines a report parameter of data type Date/Time with which users can filter the report by a single date. The parameter value cannot be directly used to filter the Multidimensional Expressions (MDX) query for the dataset. You need to ensure that the report displays data filtered by the user-entered value. You must achieve this goal by using the least amount of development effort. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Edit the dataset query parameter. Change the Value property of the report parameter to an expression that uses the same format as the date dimension member key value.
- B. Change the dataset query to Transact-SQL (T-SQL). Use the OPENROWSET function to query the cube. Output the cube results to the T-SQL query and use a Convert function to change the report parameter value into the same format as the date dimension member.
- C. Edit the dataset query parameter. Create a subcube subquery that uses the StrToSet MDX function and accepts the report parameter value.
- D. Edit the dataset query parameter. Change the Name property of the dataset query parameter so that it points to a name value for each date dimension member.

Answer: A

Question: 3

You are designing a subscription strategy for a SQL Server Reporting Services (SSRS) report. You have an application that populates a table with user-specific subscription schedules and report formats. You need to ensure that users can receive reports by email according to their preferences. Email messages will be sent via an internal mail server. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Create a standard SSRS subscription for each subscription schedule.
- B. Create one data-driven SSRS subscription. Schedule the subscription to frequently retrieve user preferences.
- C. Create a data-driven SSRS subscription for each record in the schedule table.
- D. Create a standard SSRS subscription for each record in the table.

Answer: B

Question: 4

You are using a new installation of SQL Server Reporting Services (SSRS) to create three sales reports that consume data from a stored procedure. The stored procedure is defined in a SQL Azure database. All reports must pass USA to the Country parameter of the stored procedure. Users cannot change the Country report parameter value. You need to configure the report parameter properties. How should you configure the report parameter properties?

To answer, select the appropriate setting or settings in the answer area.

Report Parameter Properties

Change name, data type, and other options.

Name:
Country

Prompt:
Country

Data type:
Text

Allow blank value (*)

Allow null value

Allow multiple values

Select parameter visibility:

Visible

Hidden

Internal

Answer: Allow null value

Question: 5

You are designing a fact table in a SQL Server database. The fact table must meet the following requirements:

- Include a columnstore index.
- Allow users to choose up to 10 dimension tables and up to five facts at one time.
- Maximize performance of queries that aggregate measures by using any of the 10 dimensions.
- Support billions of rows.
- Use the most efficient design strategy.

You need to design the fact table to meet the requirements. What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Design a fact table with 10 dimensional key columns and 5 measure columns. Place the columnstore index on only the measure columns.
- B. Design a fact table with 10 dimensional key columns and 5 measure columns. Place the columnstore index on the dimensional key columns and the measure columns.
- C. Design a fact table with 5 dimensional key columns and 10 measure columns. Place the columnstore index on the measure columns.
- D. Design a fact table with 5 dimensional key columns and 10 measure columns. Place the columnstore index on the dimensional key columns.

Answer: B

Get Full Version of Exam 70-460 PDF Q&A

techeXams presents authentic, genuine and valid study material, which promise 100% success in very first attempt. To take optimal results for 70-460 exam, you need to buy full version of 70-460 question and answer. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. So come join us and quench your thirst for knowledge.
