

**70-516**

(TS: Accessing Data with Microsoft .NET Framework 4)

Document version: 9.30.06

## Important Note About 70-516 PDF

techeXams' **70-516 PDF** is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

## Question: 1

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create an application. The application uses the ADO.NET Entity Framework to model entities. You define a Category class by writing the following code segment. (Line numbers are included for reference only.)

```
01 public class Category 02 { 03 public int CategoryID { get; set; } 04 public string  
05 CategoryName { get; set; } 06 public string Description { get; set; } 07 public byte[] Picture  
08 { get; set; } 09 }
```

You need to add a collection named Products to the Category class. You also need to ensure that the collection supports deferred loading. Which code segment should you insert at line 07?

- A. `public static List <Product> Products { get; set; }`
- B. `public virtual List <Product> Products { get; set; }`
- C. `public abstract List <Product> Products { get; set; }`
- D. `protected List <Product> Products { get; set; }`

Answer: B

## Question: 2

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create a Windows Forms application. You plan to deploy the application to several shared client computers. You write the following code segment. (Line numbers are included for reference only.)

```
01 Configuration config = ConfigurationManager.OpenExeConfiguration(exeConfigName);  
02 03 config.Save(); 04 ...
```

You need to encrypt the connection string stored in the .config file. Which code segment should you insert at line 02?

- A. `ConnectionStringsSection section = config.GetSection("connectionString") as  
ConnectionStringsSection;  
section.SectionInformation.ProtectSection("DataProtectionConfigurationProvider");`
- B. `ConnectionStringsSection section = config.GetSection("connectionStrings") as  
ConnectionStringsSection;  
section.SectionInformation.ProtectSection("DataProtectionConfigurationProvider");`
- C. `ConnectionStringsSection section = config.GetSection("connectionString") as  
ConnectionStringsSection;  
section.SectionInformation.ProtectSection("RsaProtectedConfigurationProvider");`

```
D. ConnectionStringsSection section = config.GetSection("connectionStrings") as
ConnectionStringsSection;
section.SectionInformation.ProtectSection("RsaProtectedConfigurationProvider");
```

Answer: D

## Question: 3

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create an application. The application connects to a Microsoft SQL Server database. The application uses the ADO.NET Entity Framework to model entities. The database includes objects based on the exhibit. The application includes the following code segment. (Line numbers are included for reference only.)

```
01 using (AdventureWorksEntities context = new AdventureWorksEntities()){ 02 03
foreach (SalesOrderHeader order in customer.SalesOrderHeader){
04 Console.WriteLine(String.Format("Order: {0} ", order.SalesOrderNumber)); 05 foreach
(SalesOrderDetail item in order.SalesOrderDetail){
06 Console.WriteLine(String.Format("Quantity: {0} ", item.Quantity));
07 Console.WriteLine(String.Format("Product: {0} ", item.Product.Name)); 08} 09} 10}
```

You want to list all the orders for a specified customer. You need to ensure that the list contains the following fields: "Order number "Quantity of products "Product name Which code segment should you insert at line 02?

- A. Contact customer = context.Contact.Where("it.ContactID = @customerId", new ObjectParameter("@customerId", customerId)).First();
- B. Contact customer = context.Contact.Where("it.ContactID = @customerId", new ObjectParameter("customerId", customerId)).First();
- C. context.ContextOptions.LazyLoadingEnabled = true; Contact customer = (From contact in context.Contact include("SalesOrderHeader.SalesOrderDetail") select conatct). FirstOrDefault();
- D. Contact customer = (From contact in context.Contact include("SalesOrderHeader") select conatct). FirstOrDefault();

Answer: B

## Question: 4

You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create an application. You use the ADO.NET Entity Framework to model entities. You write the following code segment. (Line numbers are included for reference only.)

**01AdventureWorksEntities context = New AdventureWorksEntities (http://localhost:1234/AdventureWorks.svc ); 02 03var q = from c in context.Customers 04where c.City == "London" 05orderby c.CompanyName 06select c;**  
**You need to ensure that the application meets the following requirements: "Compares the current values of unmodified properties with values returned from the data source. "Marks the property as modified when the properties are not the same. Which code segment should you insert at line 02?**

- A. context.MergeOption = MergeOption.AppendOnly;
- B. context.MergeOption = MergeOption.PreserveChanges;
- C. context.MergeOption = MergeOption.OverwriteChanges;
- D. context.MergeOption = MergeOption.NoTracking;

Answer: B

Question: 5

**You use Microsoft Visual Studio 2010 and Microsoft .NET Framework 4 to create an application. You use the ADO.NET Entity Framework to model entities. You write the following code segment. (Line numbers are included for reference only.)**

```
01public partial class SalesOrderDetail : EntityObject 02{ 03partial void  
OnOrderQtyChanging(short value) 04{ 05 06{ 07... 08} 09} 10}
```

**You need to find out whether the object has a valid EntityStateEntry instance. Which code segment should you insert at line 05?**

- A. if (this.EntityState != EntityState.Detached)
- B. if (this.EntityState != EntityState.Unchanged)
- C. if (this.EntityState != EntityState.Modified)
- D. if (this.EntityState != EntityState.Added)

Answer: D

Question: 6

**You use Microsoft Visual Studio 2010, Microsoft Sync Framework, and Microsoft .NET Framework 4 to create an application. You have a ServerSyncProvider connected to a Microsoft SQL Server database. The database is hosted on a Web server. Users will use the Internet to access the Customer database through the ServerSyncProvider. You write the following code segment. (Line numbers are included for reference only.)**

4

```
01 SyncTable customerSyncTable = new SyncTable("Customer");  
02 customerSyncTable.CreationOption = TableCreationOption.  
UploadExistingOrCreateNewTable; 03 04 customerSyncTable.SyncGroup =  
customerSyncGroup; 05 this.Configuration.SyncTables.Add(customerSyncTable);
```

You need to ensure that the application meets the following requirements: "Users can modify data locally and receive changes from the server. Only changed rows are transferred during synchronization. Which code segment should you insert at line 03?"

- A. customerSyncTable.SyncDirection = SyncDirection.DownloadOnly;
- B. customerSyncTable.SyncDirection = SyncDirection.Snapshot;
- C. customerSyncTable.SyncDirection = SyncDirection.Bidirectional;
- D. customerSyncTable.SyncDirection = SyncDirection.UploadOnly;

Answer: C

## Get Full Version of Exam 70-516 PDF Q&A

techeXams presents authentic, genuine and valid study material, which promise 100% success in very first attempt. To take optimal results for 70-516 exam, you need to buy full version of 70-516 question and answer. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. So come join us and quench your thirst for knowledge.
