

70-595

(TS: Developing Business Process and Integration Solutions by Using Microsoft BizTalk Server 2010)

Document version: 11.05.15

Important Note About 70-595 PDF

techeXams' **70-595 PDF** is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

Question: 1

A BizTalk Server 2010 messaging solution processes XML messages. The solution uses a single Business Activity Monitoring (BAM) activity and BAM tracking profile to extract content values from the message. Some of the values are bound to a receive port when the message is received. The other values are bound to a send port when the message is transmitted. At run time you find out that instead of one, two records are created in the BAM database for each processed message. One record contains only the values bound to the receive port. The second record contains only the values bound to the send port. You need to ensure that only one record is created that contains all the values for every message. What should you do?

- A. Add a continuation and continuation ID to the tracking profile.
- B. In the tracking profile, associate a unique value from the message payload to the ActivityID field.
- C. Add a relationship to the tracking profile.
- D. Add a document reference URL to the tracking profile.

Answer: C

Question: 2

You are developing a BizTalk Server 2010 orchestration. In the Business Rule Composer, you create and save a policy named BonusPolicy that calculates an employee's bonus based on year-to-date sales. You add a Call Rules shape to the orchestration. In the BizTalk Orchestration Designer, BonusPolicy is not listed in the menu of available policies to call. You need to make the policy available in the Orchestration Designer. What should you do?

- A. Use the Rule Engine Deployment Wizard to export BonusPolicy.
- B. In the Business Rules Composer, publish BonusPolicy.
- C. In the Business Rules Composer, create a vocabulary with a definition that references the XML schema used to evaluate BonusPolicy. Publish the vocabulary.
- D. In the Business Rules Composer, use the Rule Store menu and load policies from the BizTalkRuleEngineDb database.

Answer: B

Question: 3

A company tracks storage containers and integrates radio frequency identification (RFID) readers with a server shipping management system built on BizTalk Server 2010. You define a custom tag event named ContainerArrivedEvent. You use the RFID manager to add the SqlServerSink component to the RFID process. You need to ensure that the SqlServerSink component logs only the custom tag event. What should you specify for the EventTypes property?

- A. ContainerArrivedEvent
- B. the fully qualified assembly name
- C. All
- D. Generic

Answer: D

Question: 4

You use BizTalk Server 2010 to send EDI purchase orders to three trading partners. All of the trading partners use the same version of the purchase order message but define custom codes for the product types. The trading partners confirm purchase order acknowledgements by email instead of through response messages. The standard purchase order schemas included with BizTalk do not include the custom product type codes for each trading partner. You need to ensure that each trading partners purchase order schema is the schema that is used for orders that are sent to them. What should you do?

- A. Under the transaction set settings for the party, define an envelope for each trading partner. For the namespace, use the custom namespace you defined for each BizTalk schema.
- B. Under the transaction set settings for the party, define a local host setting for each trading partner. For the namespace, use the custom namespace you defined for each BizTalk schema.
- C. Under the transaction set settings for the party, define an envelope for each trading partner. For the namespace, use the default namespace defined by BizTalk for EDI messages.
- D. Under the transaction set settings for the party, define a local host setting for each trading partner. For the namespace, use the default namespace defined by BizTalk for EDI messages.

Answer: C

Question: 5

A BizTalk Server 2010 orchestration calls a Business Rules Engine policy. This policy evaluates test scores to determine whether a candidate passes or fails. The BizTalk solution and the policy are deployed. Business users have decided that the value of a passing score should be raised from 60% to 70%. You need to adjust the policy to reflect the modified rule parameter. What should you do?

- A. Open the policy in the Business Rules Composer. Create a new version of the policy and edit this version to reflect the changed parameter. Then deploy the new version.
- B. Open the policy in the Business Rules Composer. Create a new version of the policy and edit this version to reflect the changed parameter. Then publish the new version.
- C. Create a new vocabulary in the Business Rules Composer. Add the new parameter to this vocabulary and then publish the vocabulary.
- D. Open the policy in the Business Rules Composer and create a different policy with a new name. Then copy the currently deployed version to the new policy and modify to reflect the changed parameter. Deploy the new policy.

Answer: C

Question: 6

A BizTalk Server 2010 solution uses Business Activity Monitoring (BAM) to collect business information. The solution contains a BAM view named OrderView. After you deploy the view, application users can log on to the BAM portal but the OrderView view does not appear to them. You need to ensure that the BAM portal displays the OrderView view to application users. What should you do?

- A. Use the BizTalk Tracking Profile Utility (bttdeploy.exe) to redeploy the tracking profile used in this solution.
- B. Use the Business Activity Monitoring Utility (bm.exe) to add a subscription for the OrderView view.
- C. Create a Microsoft SQL Server logins for the users on the server that hosts the BAMPrimaryImport database.
- D. Use the Business Activity Monitoring Utility (bm.exe) to grant the users access to the OrderView view.

Answer: B

Question: 7

You are developing a solution for BizTalk Server 2010. You deploy the solution to the runtime environment. The solution includes one orchestration with a direct bound send port that sends a message to the BizTalk MessageBox database for routing to a folder. After starting the BizTalk application for testing, you notice that the following error is logged in the servers event log: The published message could not be routed because no subscribers were found. This error occurs if the subscribing orchestration or send port has not been enlisted, or if some of the message properties necessary for subscription evaluation have not been promoted. Please use the BizTalk Administration console to troubleshoot this failure. You need to resolve the error without changing the code in the orchestration and without redeploying the solution. What should you do?

- A. Add a send port that uses the XmlTransmit pipeline.
- B. Add a send port that has a filter that matches the message type.
- C. Add a receive port that uses the XmlReceive pipeline.
- D. Add a dynamic send port.

Answer: B

Question: 8

A BizTalk Server 2010 solution sends out XML invoices to a customer on a regular basis. The customer has sent you the public key part of their certificate. You installed this certificate on the server and set up a send port to use this certificate. The certification authority for the certificate is one that you already trust. You need to ensure that all invoices sent to the customer are encrypted using the provided public key. What should you do?

- A. Create a custom pipeline that uses the MIME/SMIME encoder component. Set the Enable encryption property of the component to True.
- B. Create a custom pipeline that uses the MIME/SMIME encoder component. Set the Add signing certification to message property of the component to True.
- C. Create a custom pipeline that uses the MIME/SMIME encoder component. Set the Content transfer encoding property of the component to Base64.
- D. Create a custom pipeline that uses the default XML assembler component. Use the default values for all properties of the component.

Answer: B

Question: 9

A BizTalk Server 2010 solution transmits messages to a suppliers FTP server. The solution uses an FTP send port. The transport URI points to the main FTP server location. The supplier needs to receive the message immediately if the connection with the main FTP server cannot be established. You need to enable transmission redirection to an alternative FTP server. What should you do?

- A. Set the Retry count to 1. Set the Backup Transport Type to FTP and the Backup Transport URI to the alternative FTP server location.
- B. Enable ordered delivery for the send port.
- C. Set the Retry count to 0. Set the Backup Transport Type to FTP and the Backup Transport URI to the alternative FTP server location.
- D. Enable failed message routing for the send port.

Answer: C

Get Full Version of Exam 70-595 PDF Q&A

techeXams presents authentic, genuine and valid study material, which promise 100% success in very first attempt. To take optimal results for 70-595 exam, you need to buy full version of 70-595 question and answer. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. So come join us and quench your thirst for knowledge.
