Question: 1

You install Office Communications Server 2007 Enterprise Edition for your company. You configure intelligent instant messaging filtering to block unsolicited instant messages from external locations. Several internal users report that they received unsolicited IM invitations. You need to identify the source of the unsolicited IM invitations. What should you do?

- A. Set up flat file logging on the Access Edge Server. Use Notepad to search for the user names that are receiving the unsolicited messages.
- B. Set up the OCSLogger tool on the front-end server. Set up logging for the ArchivingAgent component. Use the Snooper tool to filter by the user names that are receiving the unsolicited messages.
- C. Set up the OCSLogger tool on the Access Edge Server. Set up logging for the IIMFilter component. Use the Snooper tool to filter by the user names that are receiving the unsolicited messages.
- D. Configure archiving for the user names that are receiving the unsolicited messages. On the Call Detail Record (CDR) server, review the archive for those user names.

Answer: C

Question: 2

Your company installs Office Communications Server 2007 Enterprise Edition. The company wants to ensure that all communications are being archived. You need to enable archiving by using an existing Microsoft SQL Server computer. What should you do?

- A. Deploy the Message Queuing service on an archiving server. Install the Message Queuing service on each Access Edge Server.
- B. Deploy the Message Queuing service on an archiving server. Install the Message Queuing service on each front-end server.
- C. Configure each front-end server for verbose logging. Back up the logs every night.
- D. Configure each Access Edge Server for verbose logging. Back up the logs every night.

Answer: B

Question: 3

You install Office Communications Server 2007 Standard Edition. You need to back up all Communications Server 2007 configuration settings on your server. What should you do?

- A. Use Ntbackup.exe to back up the Communications Server application folders.
- B. Use Ntbackup.exe to back up the system state of the server.
- C. Use Lscmd.exe and the /config parameter.
- D. Use Lscmd.exe and the /archiving parameter.
