

## **70-640**

**(TS: Windows Server 2008 Active Directory, Configuring)**

Document version: 9.30.06

## Important Note, Please Read Carefully

techeXams' 70-640 Exam is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

### Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at techeXams and update 3-4 days before the scheduled exam date. Here is the procedure to get the latest version:

1. Go to <http://www.techeXams.ws/>
2. Log in the User Center
3. The latest versions of all purchased products are downloadable from here. Just click the links.

### Feedback

If you find any possible improvement, then please do let us know. We are always interested in improving the quality of this product. Feedback can be send at: [customer.service@techeXams.ws](mailto:customer.service@techeXams.ws)

### Explanations

This product does not include explanations for all questions at the moment. If you are interested in providing explanations for this exam, please contact [customer.service@techeXams.ws](mailto:customer.service@techeXams.ws).

## Question: 1

**Your company has a main office and a branch office. You deploy a read-only domain controller (RODC) that runs Microsoft Windows Server 2008 to the branch office. You need to ensure that users at the branch office are able to log on to the domain by using the RODC. What should you do?**

- A. Add another RODC to the branch office.
- B. Configure a new bridgehead server in the main office.
- C. Configure the Password Replication Policy on the RODC.
- D. Decrease the replication interval for all connection objects by using the Active Directory Sites and Services console.

Answer: C

## Question: 2

**Your company has an Active Directory forest that runs at the functional level of Windows Server 2008. You implement Active Directory Rights Management Services (AD RMS). You install Microsoft SQL Server 2005. When you attempt to open the AD RMS administration Web site, you receive the following error message: "SQL Server does not exist or access denied." You need to open the AD RMS administration Web site. Which two actions should you perform? (Each correct answer presents part of the solution. Choose two.)**

- A. Restart IIS.
- B. Install Message Queuing.
- C. Start the MSSQLSVC service.
- D. Manually delete the Service Connection Point in AD DS and restart AD RMS.

Answer: A, C

## Question: 3

**Your company has a server that runs an instance of Active Directory Lightweight Directory Service (AD LDS). You need to create new organizational units in the AD LDS application directory partition. What should you do?**

- A. Use the Active Directory Users and Computers snap-in to create the organizational units on the AD LDS application directory partition.
- B. Use the ADSI Edit snap-in to create the organizational units on the AD LDS application directory partition.
- C. Use the dsadd OU <OrganizationalUnitDN> command to create the organizational units.
- D. Use the dsmod OU <OrganizationalUnitDN> command to create the organizational units.

Answer: B

Question: 4

**Your company has an Active Directory forest that contains a single domain. The domain member server has an Active Directory Federation Services (AD FS) role installed. You need to configure AD FS to ensure that AD FS tokens contain information from the Active Directory domain. What should you do?**

- A. Add and configure a new account store.
- B. Add and configure a new account partner.
- C. Add and configure a new resource partner.
- D. Add and configure a Claims-aware application.

Answer: A

Question: 5

**You have a domain controller that runs Windows Server 2008 and is configured as a DNS server. You need to record all inbound DNS queries to the server. What should you configure in the DNS Manager console?**

- A. Enable debug logging.
- B. Enable automatic testing for simple queries.
- C. Enable automatic testing for recursive queries.
- D. Configure event logging to log errors and warnings.

Answer: A

Question: 6

**Your company has a main office and a branch office. The company has a single-domain Active Directory forest. The main office has two domain controllers named DC1 and DC2 that run Windows Server 2008. The branch office has a Windows Server 2008 read-only domain controller (RODC) named DC3. All domain controllers hold the DNS Server role and are configured as Active Directory-integrated zones. The DNS zones only allow secure updates. You need to enable dynamic DNS updates on DC3. What should you do?**

- A. Run the Ntdsutil.exe > DS Behavior commands on DC3.
- B. Run the Dnscmd.exe /ZoneResetType command on DC3.
- C. Reinstall Active Directory Domain Services on DC3 as a writable domain controller.
- D. Create a custom application directory partition on DC1. Configure the partition to store Active Directory-integrated zones.

3

Answer: C

Question: 7

**You have a single Active Directory domain. All domain controllers run Windows Server 2008 and are configured as DNS servers. The domain contains one Active Directory integrated DNS zone. You need to ensure that outdated DNS records are automatically removed from the DNS zone. What should you do?**

- A. From the properties of the zone, enable scavenging.
- B. From the properties of the zone, disable dynamic updates.
- C. From the properties of the zone, modify the TTL of the SOA record.
- D. From the command prompt, run ipconfig /flushdns.

Answer: A

Question: 8

**Your company has a DNS server that has 10 Active DirectoryCintegrated zones. You need to provide copies of the zone files of the DNS server to the security department. What should you do?**

- A. Run the dnscmd /ZoneInfo command.
- B. Run the ipconfig /registerdns command.
- C. Run the dnscmd /ZoneExport command.
- D. Run the ntdsutil > Partition Management > List commands.

Answer: C

Question: 9

**Your network consists of an Active Directory forest that contains one domain named contoso.com. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have two Active Directory-integrated zones: contoso.com and nwtraders.com. You need to ensure a user is able to modify records in the contoso.com zone. You must prevent the user from modifying the SOA record in the nwtraders.com zone. What should you do?**

- A. From the DNS Manager console, modify the permissions of the contoso.com zone.
- B. From the DNS Manager console, modify the permissions of the nwtraders.com zone.
- C. From the Active Directory Users and Computers console, run the Delegation of Control Wizard.
- D. From the Active Directory Users and Computers console, modify the permissions of the Domain Controllers organizational unit (OU).
