## Question: 1

All client computers on your company network run Windows 7 and are members of a Windows Server 2008 R2 domain. The R&D department staff are local administrators on their computers and are members of the R&D global security group. A new version of a business software application is available on the network. You plan to apply an AppLocker security policy to the R&D group. You need to ensure that members of the R&D group are not allowed to upgrade the software. What should you do?

- A. Create an Audit only restriction based on the version of the software.
- B. Create an Audit only restriction based on the publisher of the software.
- C. Create an Enforce rule restriction based on the version of the software.
- D. Create an Enforce rule restriction based on the publisher of the software.

Answer: C

## Question: 2

All client computers on your company network run Windows 7 and are members of an Active Directory Domain Services domain.

AppLocker is configured to allow only approved applications to run. Employees with standard user account permissions are able to run applications that install into the user profile folder.

You need to prevent standard users from running unauthorized applications. What should you do?

- A. Create Executable Rules by selecting the Create Default Rules option.
- B. Create Windows Installer Rules by selecting the Create Default Rules option.
- C. Create the following Windows Installer Rule: Deny - Everyone - %OSDRIVE%\Users\\Downloads\\*
- D. Create the following Executable Rule: Deny - Everyone - %OSDRIVE%\Users\\Documents\\*

Answer: A

## Question: 3

All client computers on your company network run Windows 7. A standard Windows 7 image is loaded on all new computers on the network.
