

70-690

TS: Windows HPC Server 2008, Configuring and Managing

Document version: 19.10.11

Important Note About 70-690 PDF

techeXams' **70-690 PDF** is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

Question: 1

You are a system administrator for your company. Your company has deployed a Windows HPC Server 2008 cluster. The HPC nodes are deployed by using a node template that is configured to deploy Windows HPC Pack on each node. You need to modify the node template so that HPC PowerShell and the HPC Cluster Manager are installed on the new nodes. What should you do?

- A. Install HPC PowerShell and the HPC Cluster Manager on the HPC head node. Recreate the node template by using the same settings.
- B. Add a Run OS Command task to the node template after the Install HPC Pack task. Configure the Run OS Command task to install the utilities.
- C. Add a Unicast Copy task to the node template before the Install HPC Pack task. Configure the Unicast Copy task to copy HPC PowerShell and the HPC Cluster Manager.
- D. Add a Unicast Copy task to the node template to copy the utilities. Add a Run OS Command task to the node template to install the utilities. Delete the original Install HPC Pack task.

Answer: D

Question: 2

You administer a Windows HPC Server 2008 cluster. All jobs submitted to the cluster fail. You discover that the nodes communicate successfully. You need to ensure that the jobs can be submitted successfully. What should you do first?

- A. Start the HPC Basic Profile Web Service on all nodes.
- B. Start the HPC Cluster Manager and enable job Backfilling.
- C. Start the HPC Cluster Manager and run the MPI Lightweight throughput test.
- D. Start the HPC Cluster Manager and run the job submission diagnostics tool on all nodes.

Answer: D

Question: 3

You administer a Windows HPC Server 2008 cluster for your company. You plan to configure a new node template to deploy the evaluation edition of Windows Server 2008 HPC Edition. You need to ensure that the deployment of nodes that use the template is successful. What should you do?

- A. Add a Tag element to the node XML file. Set the value of the attribute of the Tag element to Evaluation.
- B. Add a Template element to the node XML file. Set the value of the Name attribute to Evaluation.
- C. Add a Template element to the node XML file. Set the value of the Provisioned attribute to False.
- D. Add a Template element to the node XML file. Set the value of the ProductKey attribute to a valid Windows Server HPC Edition product key.

Answer: D

Question: 4

You administer a Windows HPC Server 2008 cluster that has 150 nodes. Users report that cluster jobs take longer than normal to complete. You need to calculate the network latency between the nodes. What should you do?

- A. Run a serial ring test across all nodes by using the mpipingpong.exe utility.
- B. Run the ping command on all broker nodes by using the clusrun.exe utility.
- C. Run the etl2otf command on all nodes by using the mpiexec.exe utility.
- D. Run the etl2clog command on all broker nodes by using the mpiexec.exe utility.

Answer: A

Question: 5

You administer a Windows HPC Server 2008 cluster. You have recently deployed 10 new nodes to the cluster. Users report that only seven of the new nodes function as part of the cluster. You discover that three new nodes are in the Unknown state. You need to find out the problem that has prevented the three nodes from joining the cluster. What should you do?

- A. Run the Connectivity diagnostics tool and view the results of the DNS Name Resolution test.
- B. Run the Connectivity diagnostics tool and view the results of the Internode Connectivity test.
- C. Run the System Configuration diagnostics tool and view the results of the Required Software Updates test.
- D. Run the System Configuration diagnostics tool and view the results of the Application Configuration test.

Answer: C

Question: 6

You are a system administrator for your company. Your company deploys a new Windows HPC Server 2008 cluster. The company requires a record of performance information over time. The record must include link latency and throughput statistics. You need to periodically execute a command that collects the required information. Which command should you run?

- A. ping.exe
- B. nltest.exe
- C. mpipingpong.exe
- D. Get-HPCMetric.ps1

Answer: C

Get Full Version of Exam 70-690 PDF Q&A

techeXams presents authentic, genuine and valid study material, which promise 100% success in very first attempt. To take optimal results for 70-690 exam, you need to buy full version of 70-690 question and answer. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. So come join us and quench your thirst for knowledge.
