

74-137

(Developing Microsoft Office Solutions Using XML with Office Professional Edition 2003)

Document version: 9.30.06

Important Note, Please Read Carefully

techeXams' 74-137 Exam is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at techeXams and update 3-4 days before the scheduled exam date. Here is the procedure to get the latest version:

1. Go to <http://www.techeXams.ws/>
2. Log in the User Center
3. The latest versions of all purchased products are downloadable from here. Just click the links.

Feedback

If you find any possible improvement, then please do let us know. We are always interested in improving the quality of this product. Feedback can be send at: customer.service@techeXams.ws

Explanations

This product does not include explanations for all questions at the moment. If you are interested in providing explanations for this exam, please contact customer.service@techeXams.ws.

Question: 1

You develop XML solutions using Microsoft Office Professional Enterprise Edition 2003. You create an assembly named ExpenseReport.dll by using Microsoft Visual Studio .NET 2003. ExpenseReport.dll implements the ISmartDocument interface. You create the following additional files:

- ExpenseReport.xsd
- ERManifest.xml
- ExpenseReport.doc
- ApprovalTransform.xslt

You are preparing to deploy the solution. You will use Authenticode as the evidence for granting trust.

Which two files require a digital signature? (Each correct answer presents part of the solution. Choose two.)

- A. ApprovalTransform.xslt
- B. ERManifest.xml
- C. ExpenseReport.doc
- D. ExpenseReport.dll
- E. ExpenseReport.xsd

Answer: B, D

Question: 2

You develop XML solutions using Microsoft Office Professional Enterprise Edition 2003 for Company.com. You use Microsoft Office InfoPath 2003 SP1 to create an expense report form. The form contains five required fields for each expense. If the expense is travel related, the user must complete three additional travel-related fields. You need to ensure that the travel-related fields are shown only when the user indicates that the expense is travel related. What should you do?

- A. Create multiple views.
- B. Create multiple tables
- C. Include a Choice Group control.
- D. Include multiple section controls.

Answer: D

Question: 3

You develop XML solutions using Microsoft Office Professional Enterprise Edition 2003. You are creating an XML schema for a Microsoft Office Word 2003 template. Service technicians use the template to create incident reports. Service technicians collect data about each customer incident in a tabular format. You need to ensure that data about each incident is saved as XML in the correct sequence. What should you do?

- A. Add the attribute sequence="true" to the schema element.
- B. Add the attribute sequence="true" to each complexType element.
- C. Include a sequence element as a child element of the schema element
- D. Include a sequence element as a child element of each complexType element.

Answer: D

Question: 4

You develop client solutions for Company.com. A Microsoft Office 2003 application running on client computers sends a query message that is based on the Microsoft.Search.Query schema to a custom Research service. The custom Research service returns a query response message that creates a user interface in the task pane. The user interface is formatted as a set of CheckBox controls. The CheckBox labels are based on values that are returned by the query. The query searches documents that are stored in a Microsoft SQL Server 2000 database. You discover that some of the client computers running the Office 2003 application do not have Microsoft .NET Framework installed. You need to format the query response based on a schema that resolves as the appropriate user interface. Your solution must work on all client computers running the Office 2003 application. What should you do?

- A. Base the query response message on the Microsoft.Search.Reponse.Form schema
- B. Base the query response message on the Microsoft.Search.Response.Content schema
- C. Base the query response message on the Microsoft.Search.Response.Document schema
- D. Base the query response message on a custom schema that implements a smart document assembly.

Answer: A

Question: 5

You develop XML solutions using Microsoft Office Professional Enterprise Edition 2003. The XML Schema Definition (XSD) named Employees.xsd is shown below:

```
<?xml version="1.0"?> <schema  
xmlns="http://www.w3.org/2001/XMLSchema"> <element  
name="Employee"> <complexType> <element name="Row"  
maxOccurs="unbounded"> <complexType> <element name="EmployeeID"
```

3

`type="integer" /> </complexType> </element> </complexType> </element> </schema>`

You are using the Microsoft Office Excel 2003 object model to create an XML map and import an XML file. Your method includes the following code:

```
Dim xmp As XmlMap Set xmp = _
```

```
ActiveWorkbook.XmlMaps.Add("c:\SalesData\Employees.xsd") 'Insert code here
```

You need to map the column that contains the EmployeeID data to column B in the worksheet. The column header should appear in cell B1.

What code should you add to the method?

- A. Dim xp as XPath Set xp = ActiveSheet.Range("B1").XPath xp.Value= "@EmployeeID"
- B. Dim xp as XPath Set xp = ActiveSheet.Range("B1").XPath xp.SetValue xmp, "@EmployeeID", , True
- C. Dim xp as XPath Set xp = ActiveSheet.Range("B1").XPath xp.Value= "/Employee/Row/EmployeeID"
- D. Dim xp as XPath Set xp = ActiveSheet.Range("B1").XPath xp.SetValue xmp, "/Employee/Row/EmployeeID", , True

Answer: D

Question: 6

You develop XML solutions using Microsoft Office Professional Enterprise Edition 2003. You are creating a smart document solution that will allow users to enter miscellaneous expenses. You create an XML expansion pack assembly file named ExpenseReport by using Microsoft Visual Studio .NET 2003. The namespace ExpenseReport in the assembly contains a class named Actions. The Actions class implements the ISmartDocument class. You also create a schema. You will use an XML expansion pack manifest to load the assembly by using the Microsoft Office System loader. You need to ensure that the manifest contains the code that is required to load the assembly by using the Microsoft Office System loader. What code should you use to define the <file> element for the assembly?

- A. <SD:file> <SD:type>solutionActionAndRecognizer</SD:type> <SD:version>1.0</SD:version> <SD:filePath>ExpenseReport.dll</SD:filePath> <SD:CLSNAME>ExpenseReport.Actions</SD:CLSNAME> </SD:file>
- B. <SD:file> <SD:type>solutionActionHandler</SD:type> <SD:version>1.0</SD:version> <SD:filePath>ExpenseReport.dll</SD:filePath> <SD:CLSNAME>ExpenseReport.Actions</SD:CLSNAME> <SD:managed/> </SD:file>
- C. <SD:file> <SD:type>solutionActionAndRecognizer</SD:type> <SD:version>1.0</SD:version> <SD:filePath>ExpenseReport.dll</SD:filePath> <SD:CLSNAME>Actions</SD:CLSNAME> </SD:file>
- D. <SD:file> <SD:type>solutionActionHandler</SD:type> <SD:version>1.0</SD:version> <SD:filePath>ExpenseReport.dll</SD:filePath> <SD:CLSNAME>Actions</SD:CLSNAME> <SD:managed/> </SD:file>

Answer: B

Question: 7

You develop XML solutions for a company that uses Microsoft Office Professional Edition 2003. The company's client computers have Microsoft Office Professional Edition 2003 with Service Pack 1 and either Office InfoPath 2003 or Office InfoPath 2003 with Service Pack 1. You develop a Microsoft Office InfoPath 2003 solution for the company. You add a data source to the solution's data library. You need to ensure that the data is displayed in the appropriate display format. What should you do?

- A. Run the DownlevelFormat method on the data source.
- B. Run the DownlevelFormat method on the data source.
- C. Instruct the new users to update their client computers.
- D. Instruct the new users to update their client computers.

Microsoft Office Professional Edition 2003. The company's client computers have Microsoft Office Professional Edition 2003 with Service Pack 1 and either Office InfoPath 2003 or Office InfoPath 2003 with Service Pack 1. You develop a Microsoft Office InfoPath 2003 solution for the company. You add a data source to the solution's data library. You need to ensure that the data is displayed in the appropriate display format. What should you do?

to all client computers.
to all client computers.

Answer: D

Question: 8

You develop XML solutions for a company that uses Microsoft Office Professional Edition 2003. Managers use a Microsoft Office Professional Edition 2003 solution to generate expense reports. The reports are generated from an XML file. The report document must be displayed in a specific format. You need to ensure that the totals are displayed in the appropriate display format. What should you do?

- A. Create an XML file that contains the appropriate display format in the file.
- B. Create an XML file that contains the appropriate display format in the file.
- C. Create an XML file that contains the appropriate display format in the file.
- D. Create an XML file that contains the appropriate display format in the file.

Microsoft Office Professional Edition 2003. Managers use a Microsoft Office Professional Edition 2003 solution to generate expense reports. The reports are generated from an XML file. The report document must be displayed in a specific format. You need to ensure that the totals are displayed in the appropriate display format. What should you do?

appropriate display format in the file.
appropriate display format in the file.
appropriate display format in the file.
appropriate display format in the file.

Answer: C
