Question: 1

Your company, Contoso, Ltd., has a main office and a branch office. The offices are connected by a WAN link. Contoso has an Active Directory forest that contains a single domain named ad.contoso.com. The ad.contoso.com domain contains one domain controller named DC1 that is located in the main office. DC1 is configured as a DNS server for the ad.contoso.com DNS zone. This zone is configured as a standard primary zone. You install a new domain controller named DC2 in the branch office. You install DNS on DC2. You need to ensure that the DNS service can update records and resolve DNS queries in the event that a WAN link fails. What should you do?

- A. Create a new stub zone named ad.contoso.com on DC2.
- B. Configure the DNS server on DC2 to forward requests to DC1.
- C. Create a new standard secondary zone named ad.contoso.com on DC2.
- D. Convert the ad.contoso.com zone on DC1 to an Active Directory-integrated zone.

Answer: D

Question: 2

Your company has a DNS server that has 10 Active Directory integrated zones. You need to provide copies of the zone files of the DNS server to the security department. What should you do?

- A. Run the dnscmd /ZoneInfo command.
- B. Run the ipconfig /registerdns command.
- C. Run the dnscmd /ZoneExport command.
- D. Run the ntdsutil > Partition Management > List commands.

Answer: C

Question: 3

Your company has a single Active Directory domain named intranet.adatum.com. The domain controllers run Windows Server 2008 and the DNS server role. All computers, including non-domain members, dynamically register their DNS records. You need to configure the intranet.adatum.com zone to allow only domain members to dynamically register DNS records. What should you do?

- A. Set dynamic updates to Secure Only.
- B. Enable zone transfers to Name Servers.
- C. Remove the Authenticated Users group.
- D. Deny the Everyone group the Create All Child Objects permission.

Answer: A

Question: 4

Your company has a main office and a branch office. The company has a single-domain Active Directory forest. The main office has two domain controllers named DC1 and DC2 that run Windows Server 2008. The branch office has a Windows Server 2008 read-only domain controller (RODC) named DC3. All domain controllers hold the DNS Server role and are configured as Active Directory-integrated zones. The DNS zones only allow secure updates. You need to enable dynamic DNS updates on DC3. What should you do?

- A. Run the Ntdsutil.exe > DS Behavior commands on DC3.
- B. Run the Dnscmd.exe /ZoneResetType command on DC3.
- C. Reinstall Active Directory Domain Services on DC3 as a writable domain controller.
- D. Create a custom application directory partition on DC1. Configure the partition to store Active Directory-integrated zones.

Answer: C

Question: 5

You network consists of an Active Directory forest named contoso.com. All servers run Windows Server 2008. All domain controllers are configured as DNS servers. The contoso.com DNS zone is stored in the ForestDnsZones Active Directory application partition. You have a member server that contains a standard primary DNS zone for dev.contoso.com. You need to ensure that all domain controllers can resolve names for dev.contoso.com. What should you do?

- A. Create a NS record in the contoso.com zone.
- B. Create a delegation in the contoso.com zone.
- C. Create a standard secondary zone on a Global Catalog server.
- D. Modify the properties of the SOA record in the contoso.com zone.

Answer: B

Question: 6

Your network consists of an Active Directory forest that contains one domain named contoso.com. All domain controllers run Windows Server 2008 and are configured as DNS servers. You have two Active Directory-integrated zones: contoso.com and nwtraders.com. You need to ensure a user is able to modify records in the contoso.com zone. You must prevent the user from modifying the SOA record in the nwtraders.com zone. What should you do?

- A. From the DNS Manager console, modify the permissions of the contoso.com zone.
- B. From the DNS Manager console, modify the permissions of the nwtraders.com zone.
- C. From the Active Directory Users and Computers console, run the Delegation of Control Wizard.
- D. From the Active Directory Users and Computers console, modify the permissions of the Domain Controllers organizational unit (OU).

Answer: A

Get Full Version of Exam 83-640 PDF Q&A

techeXams presents authentic, genuine and valid study material, which promise 100% success in very first attempt. To take optimal results for 83-640 exam, you need to buy full version of 83-640 question and answer. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. So come join us and quench your thirst for knowledge.
