Question: 1

A customer has purchased a four-server Multimedia Communication Server (MCS) 5100 Rls. 4.0 system. Which three additional hardware components will the customer have to provide to complete the installation? (Choose three.)

- A. a Layer 2 switch
- B. a Layer 3 switch
- C. one PC for the Management Console
- D. an additional hard drive for mirroring the Oracle database
- E. one additional cat-5 Ethernet cable to connect the MRV Terminal Server to the Layer 2 switch

Answer: A, C, E

Question: 2

To ensure that the database backup is being scheduled on a daily basis, the backup status for the Database Manager must be verified. How can you verify that the database backups are scheduled properly for the coming evening?

- A. On the OEM Console, from the Network tree, select Jobs, and ensure that the backups are scheduled in the Active panel.
- B. On the OEM Console, from the Network tree, select Databases and ensure that the backups are scheduled in the Backup panel.
- C. On the System Management Console, from the hierarchy tree right-click on the Database Manager name, choose Query and select Backup Jobs to verify the jobs are scheduled.
- D. On the System Management Console, from the hierarchy tree right-click on the Database Manager, choose OAM Configuration and select Jobs to verify that the jobs are scheduled.

Answer: A

Question: 3

An administrator is in the process of installing the Multimedia Communication Server (MCS) 5100 Rls. 4.0 software. The Management Console Graphical User Interface (GUI) has successfully launched. What is the next step in the installation process for a four-server system?

- A. Deploy the Session Manager.
- B. Deploy the Accounting Manager.
- C. Deploy the Provisioning Manager.
- D. Verify the deployment of the System Manager.

Answer: B

Question: 4

During the process of upgrading the Management Console through the

- A. Click PATCH; wait for the console to be updated.
- B. Click DEPLOY; wait for the console to be updated.
- C. Click START; wait for the console to be updated.
- D. Click UPGRADE; wait for the console to be updated.

through the

Answer: B

Question: 5

A customer is verifying the Management Server during the MCS 5100 Rls. 4.0 four-sequence test. The customer uses the ifconfig -a command to help resolve it?

- A. It will restart all Ethernet interfaces.
- B. It will show the IP address and determine if there is a conflict.
- C. It will reload the configuration files.
- D. This command will show the IP address. This information will help determine if there is a conflict.

Prov / IP Client Information Server (MCS) documentation states the cause and help resolve it?

I re-activate all information will help been made but not faces were loaded.

Answer: B
