Question: 1

Nortel uses IPSec (IP Security) within various Communication Server (CS) 1000 Rls. 5.0 elements. IPSec provides a basis for the CS 1000 Intrasystem Signaling Security System (ISSS) solution. If you want to use ISSS in your Nortel system, what must you do?

- A. Use a Secure Multimedia Controller.
- B. Enable ISSS from the Call Server.
- C. Nothing; ISSS is enabled by default.
- D. Enable ISSS from the Signaling Server.

Answer: B

Question: 2

How do you access the Network Time Protocol configuration from the Element Manager main system navigation tree?

- A. Security>Passwords
- B. Tools>Date and Time
- C. Security>Login Options
- D. Tools>Call Server Initialization

Answer: B

Question: 3

Your customer wants to configure Media Security for their Phase 1 IP telephones. You have turned on the "Always Secure" option in the Media Security window in Element Manager and clicked "Submit". You have also configured the CLS for all Phase 1 IP telephones to MSBT. The documentation states that at this time a "secure" icon should appear on the IP telephone, indicating that Secure Real-Time Transport Protocol (SRTP) is used as the protocol. During a call, the icon does not appear, and the call does not appear to be secure. Why has this happened?

- A. Media Security only works with Phase 2 IP telephones.
- B. You selected the wrong secured number of packets (NKEY).
- C. You did not set the Media Security System Default for the TN.
- D. You changed the default on the Session Key Validity Time (TKEY).

Answer: A

Question: 4
