Question: 1

An object needs to be locked in which lock mode before modifications can begin on that object?

- A. Read (R)
- B. Intent Exclusive (IX)
- C. ReadOnly (RO)
- D. Write (W)

Answer: B

Question: 2

Your TM1 server takes over one hour to start up. You want to speed up the start up time. You have a multi-CPU production server and the cube rules in your TM1 application does not contain any conditional feeders. Which tm1s.cfg parameter would you choose to help speed up the TM1 server start up time?

- A. CalculationThresholdForStorage
- B. AllowSeparateNandCRules
- C. MaximumCubeLoadThreads
- D. CheckFeedersMaximumCells

Answer: C

Question: 3

Which three tm1s.cfg parameters must be unique to run two TM1 servers on the same production server? (Choose three.)

- A. ServerName
- B. DataBaseDirectory
- C. ClientMessagePortNumber

- D. AdminHost
- E. PortNumber

Answer: ABE

Question: 4

Click the Exhibit button. A client using TM1 Web, where the users are making a significant number of changes, is experiencing sporadic delays during data entry. A snapshot of thread activity from TM1Top was taken during a busy period as shown in the exhibit. Which proposed model/application change should have a positive effect on this application's performance?

- A. Make sure all dimension subsets are no more than 80 members long.
- B. Defragment the TM1 server data directory hard drive.
- C. Introduce use of Personal Workspace Writeback mode.
- D. Introduce use of BatchUpdateStart() and BatchUpdateFinishWait().

Answer: C

Question: 5

Which two logging parameters can be used to control how much disk space the log files consume?

(Choose two.)

- A. log4j.appender.S1.MemorySize
- B. log4j.appender.S1.MaxFileSize
- C. log4j.appender.S1.MaxBackupIndex
- D. log4j.logger.TM1.MultipleFiles

Answer: BC

Question: 6

An application is needed for 1500 users to forecast driver-based expense data. Which three objects are required to set up and run the application in a partitioned environment? (Choose three.)

- A. a dimension identified in each cube to be partitioned on, and an attribute to hold the partition name
- B. TI processes to move data between the main cube(s) and the partitions
- C. an input sheet containing the user name and an action button to allow users immediate update of their partition and the main cube(s)
- D. a chore to move all data from all partition cubes to all of the main cubes
- E. a TI process to set up security on the partitions equivalent to the original cube

Answer: ABE
