Question: 1

In Analyst, what does the Reset command do when applied to an active D-Cube?

- A. Sets all selected values to zero
- B. Returns the data to the last saved version
- C. Reorients the D-Cube to appear as it did when first opened
- D. Displays the value that appeared before the user pressed Enter

Answer: B

Question: 2

What control(s) must be applied to a cell to prevent breakback, direct data entry, and data loading using a D-Link?

- A. Hold and Lock
- B. Hold and Protect
- C. Lock and Protect
- D. Lock will prevent all three

Answer: A

Question: 3

What must be used as the source when an administrator creates an administration link in Contributor?

- A. Production application
- B. Development application
- C. Publish datastore
- D. Analyst library

Answer: A

Question: 4

Where does a modeler change the name of a D-Cube?

- A. In Edit menu

- B. In D-Cube options
- C. In Library functions
- D. In Save As dialog box

Answer: C

Question: 5

An administrator wants to create a deployment package to export an application (model and data) from the development environment to the test environment. Where does the administrator view the status of the deployment export?

- A. Contributor Administration Console, Monitoring Console
- B. Contributor Administration Console, Job Management
- C. Cognos Administration, Schedule Management
- D. Cognos Administration, Server Administration

Answer: A

Question: 6

Which statement is correct when dealing with the Generate Framework Manager Model Extension?

- A. The Framework Manager model for an Analyst Library using Planning Data Server provides access to more than one cube.
- B. The Framework Manager model for a Contributor application using Planning Data Server can be enhanced with calculations, filters and prompts.
- C. The Framework Manager model for the Publish Container of a Contributor application can be enhanced with calculations, filters and prompts.
- D. The Framework Manager model for the Publish Container of a Contributor application can provide real time access to Analyst libraries.

Answer: C

Question: 7

Application IDs and object names must be unique within a planning network. When importing a deployment, what happens if duplicate names or IDs are found?

- A. The user is presented with errors which are written to an import log file and the import process stops.
- B. The user is presented with errors which are presented on a dialog and the import process stops.
- C. The user is presented with a warning and if they proceed, any existing applications or objects with common names or IDs will be preserved.

Question: 8

A modeler is creating a D-Link to populate a D-Cube with data from an SQL database. Why would the modeler use the Fetch functionality when creating the D-Link?

- A. To select a new data source for the D-Link
- B. To preview the contents of the columns in the data source
- C. To retrieve the names of the available tables in the data source
- D. To generate an SQL statement that references each column in the data source

Answer: B**Question: 9**

A Planning administrator wants to allow contributors access to planning applications deployed to Cognos Connection. Where will authentication be performed when Contributors log on to Cognos Connection?

- A. In a third party provider such as Sun One LDAP or Active Directory
- B. In the Rights folder in development application in the Contributor Administration Console
- C. Through the assignment of Capabilities to the Planning Contributor User role in the Cognos namespace
- D. In the Security Filters of the Framework Manager model generated by the Contributor Administration Console Administration extension

Answer: A**Question: 10**

In an A-Table, what happens if the Attach to D-List checkbox is selected on both the source and target sides?

- A. D-Links containing these D-Lists will automatically use this A-Table.
- B. Any changes to the D-Lists are automatically reflected in the A-Table.
- C. Items cannot be sorted; they appear as they do in the D-Lists.
- D. A sub-column cannot be cut; items appear as they do in the D-Lists.

Question: 11

How can an administrator record user actions in the Web client, such as typing data, importing files, and copying and pasting data?

- A. The administrator can enable user annotations.
- B. The administrator can enable breakback.
- C. The administrator can enable audit annotations.
- D. The administrator can enable bouncing.

Answer: C**Question: 12**

A modeler wants to control the widths of columns in D-Cubes and the Column Width option is set to a minimum of 15. At what level is this option applied?

- A. To all D-Cubes in the library
- B. To a specific D-Cube
- C. To a specific D-List
- D. To a specific D-List item

Answer: B**Question: 13**

Which of the following statements is correct with respect to the use of Event Studio with planning data?

- A. Users can be alerted to events that require them to review their plans.
- B. Event Studio agents can be written against Analyst libraries.
- C. Data Validations can be used to specify an event condition.

D. The status of event agents can be viewed in the Monitoring Console.

Answer: A

Question: 14
