## Question: 1

**A company has a policy that all passwords must be changed every 45 days. This includes Web Agent passwords for HP Management Agents and SNMP community strings. The customer has 400 HP ProLiant servers. How can the customer change SNMP community strings and Web Agent passwords using HP Systems Insight Manager?**

- A. Use the Windows 2000 File replication service to replicate the cpqhmmmd.acl cpqhmmmd.acl to the C:\Compaq\wbem directory on each server.
- B. Create a polling task in Insight Manager to have the managed devices poll the Insight Manager server for the new password and SNMP community string information.
- C. Create a group configuration task to retrieve the passwords and community strings from a preconfigured server. Distribute the passwords and community strings to all the managed devices.
- D. Create a password request form at each managed device. Send the request to HP Systems Insight Manager. Have Insight Manager create a control task to distribute the passwords to each requesting device.

Answer: C
