

## **MB2-634**

**(CRM 4.0 Extending Microsoft Dynamics)**

Document version: 9.30.06

## Important Note, Please Read Carefully

techeXams' MB2-634 Exam is a comprehensive compilation of questions and answers that have been developed by our team of certified professionals. In order to prepare for the actual exam, all you need is to study the content of this exam questions. An average of approximately 10 to 15 hours should be spent to study these exam questions and you will surely pass your exam. It's our guarantee.

### Latest Version

We are constantly reviewing our products. New material is added and old material is revised. Free updates are available for 90 days after the purchase. You should check your member zone at techeXams and update 3-4 days before the scheduled exam date. Here is the procedure to get the latest version:

1. Go to <http://www.techeXams.ws/>
2. Log in the User Center
3. The latest versions of all purchased products are downloadable from here. Just click the links.

### Feedback

If you find any possible improvement, then please do let us know. We are always interested in improving the quality of this product. Feedback can be send at: **customer.service@techeXams.ws**

### Explanations

This product does not include explanations for all questions at the moment. If you are interested in providing explanations for this exam, please contact **customer.service@techeXams.ws**.

## Question: 1

**As an administrator of a network, you have to build some custom validation code which will force Microsoft Dynamics CRM users to enter values in certain fields of an opportunity once its CloseProbability field exceeds 50%. A message must be displayed when a user fails to enter appropriate data and they are prevented from saving the opportunity. So what should you do to ensure this? (choose more than one)**

- A. You should use client-side JScript
- B. You should use a plug-in on a pre-event
- C. You should use a plug-in on a post-event
- D. You should use a custom workflow activity

Answer: A, B

## Question: 2

**You're in charge of your company network. There's a rule in your company which provides that when a user creates or updates an account in Microsoft Dynamics CRM, corresponding data in a custom application is to be added or updated with no latency. The custom application has a .NET API that can be used to add or update data. You have to ensure that only data that is saved to Microsoft Dynamics CRM is written to the custom application. So what extension approach is most appropriate?**

- A. In a custom workflow activity.
- B. Client-side JScript in the OnSave event.
- C. In a plug-in that is registered on the pre-event.
- D. In a plug-in that is registered on the post-event.

Answer: D

## Question: 3

**Look at the following extensibility features. Please choose the appropriate one which meets the following two requirements: 1. It is available within the the Microsoft Dynamics CRM for Microsoft Office Outlook with Offline Access. 2. It can be deployed as part of the synchronization process. (Choose more than one)**

- A. Plug-ins
- B. ASP.NET extensions
- C. Custom workflow activities
- D. Client script that accesses the crmForm object model

Answer: A, D

Question: 4

**As an administrator of your company network, you've assigned a task that you have to design an extension to Microsoft Dynamics CRM for a customer. If a sales person activates a quote and the total discount exceeds a threshold, then the extension should create tasks for various people. The logic for calculating this threshold is complex, and is dependent on data in several entities, including the user, the account and the product entities. The customer wants the flexibility to change the content and properties of the tasks that are created by the code. So what extension approach is most appropriate?**

- A. Write a plug-in that checks whether the total discount exceeds the threshold, and if so creates the tasks.
- B. Use client-side JScript to check whether the discount exceeds the threshold. If it does, use further client-side JScript to create the tasks.
- C. Create a custom workflow activity that returns a value identifying whether the total discount exceeds the threshold.
- D. Use client-side JScript to check whether the discount exceeds the threshold. If it does, set a flag attribute in the quote record.

Answer: C

Question: 5

**You are an administrator of your company network. You created and deployed a web application which accesses Microsoft Dynamics CRM contact data through the CrmService Web service. The application uses a Web reference for the CrmService Web service which was created within Visual Studio and uses strongly typed Microsoft Dynamics CRM Classes. Subsequently two new attributes have been added to the contact entity. And you want to use these new attributes in your application. In order to make these new attributes available to your application, what should you do?**

- A. You don't need to do anything else.
- B. You should publish the contact entity within the Microsoft Dynamics CRM user interface.
- C. Within the Visual Studio .Net project, update the Web reference to the CrmService Web service.
- D. In Visual Studio .Net, find the proxy code generated for the Web service. Add the new attributes as properties of the contact class.

Answer: C

Question: 6

**As an administrator of your company network. You've been assigned a task, you have to write an application which uses the CrmService Web service to find an account based on its name attribute. So what method should you use?**

- A. Retrieve method of the account class.

3

- B. Retrieve method
- C. RetrieveMultiple
- D. RetrieveMultiple

Answer: D

Question: 7

You're an administrator and you need to create custom Web pages that extend Microsoft Dynamics CRM Web site entity and attribute display. What should you do to achieve this?

g custom Web pages that extend the Microsoft Dynamics CRM Web site entity and attribute display. So what should you do to achieve this?

- A. Read the display name from the metadata service.
- B. Read the display name from the metadata service.
- C. Store all text in the metadata service for each deployment.
- D. Use .Net Reflection to get attribute names at runtime.

Crmservice.  
 MetadataService.  
 satellite assembly for the attribute display.

Answer: B

Question: 8

You're an administrator and you need to create a service, which method should you use to create a CRM database?

nService Web site Microsoft Dynamics

- C. CreateDatabase
- D. CreateDatabase

Answer: D
