## Question: 1

You work as a network administrator at Company.com. You want to create an automated test environment that performs a single file SnapRestore. Every time you run the procedure, however, SnapRestore prompts you to confirm your decision to revert the file. How can you automate this step?

- A. Enter the priv set advanced mode on the storage appliance and the prompt will not appear.
- B. Enable the options snaprestore\_noprompts enable=on option.
- C. Use the option with the snap restore command.
- D. These prompts are for data protection and auditing and cannot be overridden.

Answer: C

## Question: 2

Which one of the following actions will cause a currently in sync snapmirror relationship to fall out of sync?

- A. Modifying the /etc/snapmirror.conf file on the source storage appliance
- B. Modifying the /etc/snapmirror.conf file on the destination storage appliance
- C. Running snapmirror update on the source storage appliance
- D. Running snapmirror release on the source storage appliance

Answer: B

## Question: 3

SnapMirror qtree replication can be set up for a maximum of \_\_\_\_ qtrees on any one volume.

- A. 1995
- B. 2995
- C. 3995
- D. 4995

Answer: D

## Question: 4

One week ago you performed a single file SnapRestore from a snapshot other than the most recent. You now notice that the storage appliance is now taking longer to perform snapshot deletions. Which of the following reasons is the most likely cause of this problem?

- A. Snapshots that existed after the one used for the single file SnapRestore need to be manually deleted.
- B. The SnapRestore schedule changed from weekly to hourly.

2

- C. All of the snapshots created after you did the single file SnapRestore were deleted, and reserved inodes from the snapshots still exist.
- D. Before a snapshot can be deleted, the active maps across all snapshots need to be checked for active blocks related to the file you restored.

Answer: D

Question: 5

**When you are setting up a replication prerequisite?**

- A. SnapMirror must be used as the source.
- B. The source volume must be used as the SnapMirror destination.
- C. If you are replicating to a volume, the capacity of the destination must be equal to the capacity of the source.
- D. The capacity of the destination must be greater than the capacity of the source.

When you are setting up a replication prerequisite?

When you are setting up a replication prerequisite?

When you are setting up a replication prerequisite?

Answer: B

Question: 6

**How can you throttle replication to the secondary if the primary or secondary is not throttled?**

- A. Use the -k option.
- B. Use the snapvar option.
- C. SnapVault does not support throttling.
- D. None of the above.

How can you throttle replication to the secondary if the primary or secondary is not throttled?

Answer: A

Question: 7

**syn**

- A. F825
- B. FAS960
- C. F87
- D. F820

Answer: C, D
