Question: 1

Which two installation modes prompt the user for information during the install process? (Choose two.)

- A. GUI mode
- B. Silent mode
- C. Console mode
- D. Unattended mode
- E. Remote administration mode

Answer: A, C

Question: 2

What are the three benefits of BusinessWorks Process Engines using HTTP(S) for run-time initialization? (Choose three.)

- A. HTTP(S) does not use multicast for failover.
- B. The Process Engine advertises state over HTTP(S).
- C. HTTP(S) may be used in conjunction with firewall security.
- D. HTTP(S) allows direct, point-to-point access to the administration server.
- E. HTTP(S) does not span network segments automatically and is therefore more secure.
- F. HTTP(S) does not require additional network bridging software, making it simpler to set up.

Answer: C, D, F

Question: 3

What, if any, are the restrictions of using the TIBCO Administrator GUI via a secondary server?

- A. There are no restrictions.
- B. The only restriction is that you cannot deploy applications from a secondary server.
- C. You cannot perform any monitoring or management functions using the GUI until the secondary server is changed to READ_WRITE.
- D. You cannot perform user management, deploy applications, or perform any other activity for which READ_WRITE access is required.

Answer: D

Question: 4

What are four options for creating a TIBCO team building environment? (Choose four.)

- A. Perforce
- B. file sharing/locking
- C. Visual SourceSafe

2

- D. TIBCO XML Canon
- E. TIBCO SmartMapper
- F. TIBCO Adapter cross referencing

Answer: A, B, C, D

Question: 5

A BusinessWorks application is configured to use a secure messaging provider. Where do the messages only reside on the local host?

- A. You can define the security policy. You also need to provide the security policy content. You must provide the security policy content.
- B. You can define the security policy content. You must provide the security policy content.
- C. You can define the security policy. The network security policy is defined. The network security policy is defined.
- D. You need to write the security policy giving it to the messaging provider.

Where do the messages reside on the local host? What level of security is required?

- A. Messages are stored in the local host's message store. The messages are encrypted using SSL. You must provide the security policy content.
- B. Messages are stored in the local host's message store. The messages are encrypted using SSL. You must provide the security policy content.
- C. Messages are stored in the local host's message store. The messages are encrypted using SSL. You must provide the security policy content.
- D. Messages are stored in the local host's message store. The messages are encrypted using SSL. You must provide the security policy content.

Answer: A

Question: 6

A new integration is being deployed to a production domain. To ensure security, it is essential that the integration is properly secured. Which three actions should be taken?

- A. install test and production environments
- B. ensure that all messages are encrypted
- C. ensure that each message is encrypted
- D. ensure the TIBCO Adapter is configured to use a single network subnet

What actions should be taken to ensure the integration is properly secured? How should the integration be secured?

- A. network subnet should be used for all messages
- B. appropriate domain should be used for all messages
- C. messages should be encrypted
- D. messages should be encrypted

Answer: C, E, F

- F. ensure that all messages are encrypted
- G. ensure that each message is encrypted
- H. ensure the TIBCO Adapter is configured to use a single network subnet
